

In the class for pony stallion over 13 and not more than 14 hands, the winner was a very good animal, though somewhat light in body. In the other class for stallions best adapted for getting harness ponies, the general quality was well above the average, the winner being a particularly nice pony.

The Shetlands as a whole were a really good lot, and contained some beautiful specimens of the breed. As a whole, the pony mares were somewhat disappointing. Exhibitors should make every effort to have their horses in good condition before parading them in the judging ring.

SADDLE HORSES AND PONIES.

H. J. Gidney, Lima, Benalla, Victoria.

(Complete awards in this Section will be found on page 23.)

Taking the riding horses on the whole the entries were very large and the standard of a high order. The first and second prize winners in the novice 14-stone hack class again scored first and second prizes in the open 14-stone class. These two horses were shown in Melbourne for the first time, which goes to show that there are still some good riding horses bred in Victoria. The first prize winner was a very nice horse, well up to weight, with plenty of quality and perfect manners. The second prize winner was also a nice horse with true action.

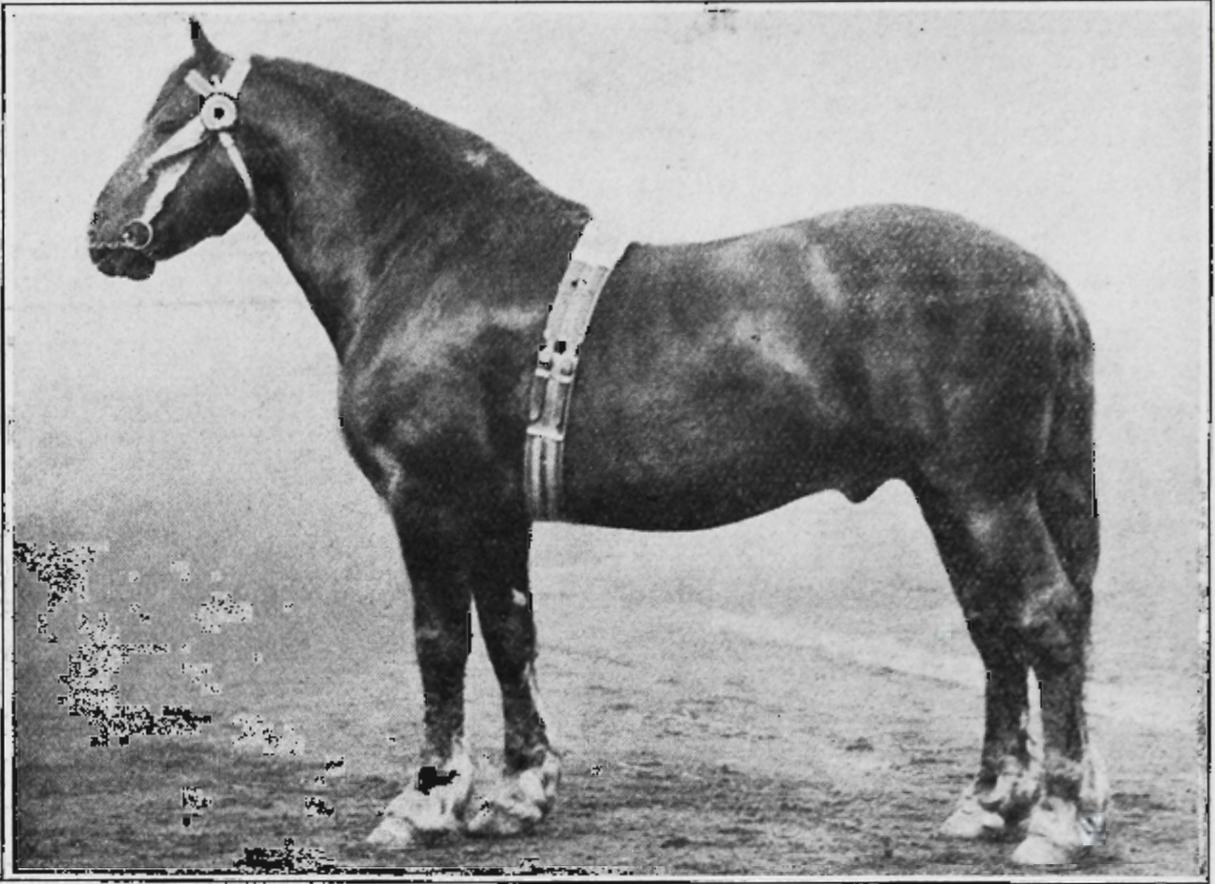

The winner in the 12-stone novice hack class was a nice brown gelding, showing breeding, quality and good manners.

The 12-stone hacks comprised the best class that came into the ring on the first day of the Show. The winner in this class gained the champion prize on the following day. In my opinion this horse has not got any superior in the Commonwealth. He is a clean bred stud book horse, full of quality, very quiet, and with good manners.

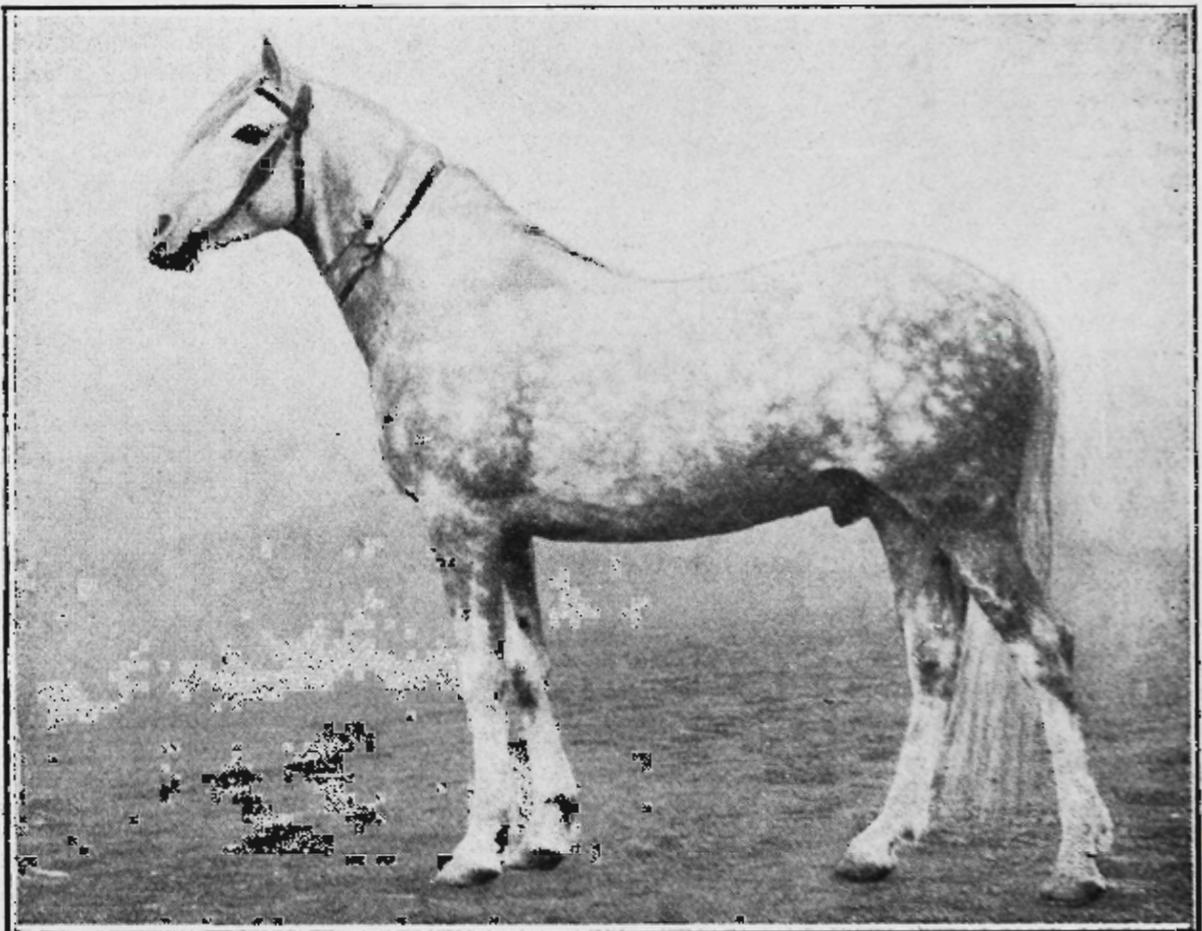

The winner in the class for 10-stone hacks was a very nice brown gelding, full of breeding and quality, and was easily first in his class, and was second best riding horse of the Show.

Sixteen ladies' hacks came into the ring, and they were a very high class lot of horses. All my prize winners of the previous day were shown in this class. After the first inspection I reduced the number down to six. In my opinion these six horses would hold their own in any part of the world. I had the pleasure of showing these horses to Major Scott, remount officer from India, and he agreed with me. The first, second and third prize winners in this class were all first prize winners in their respective classes on the previous day.

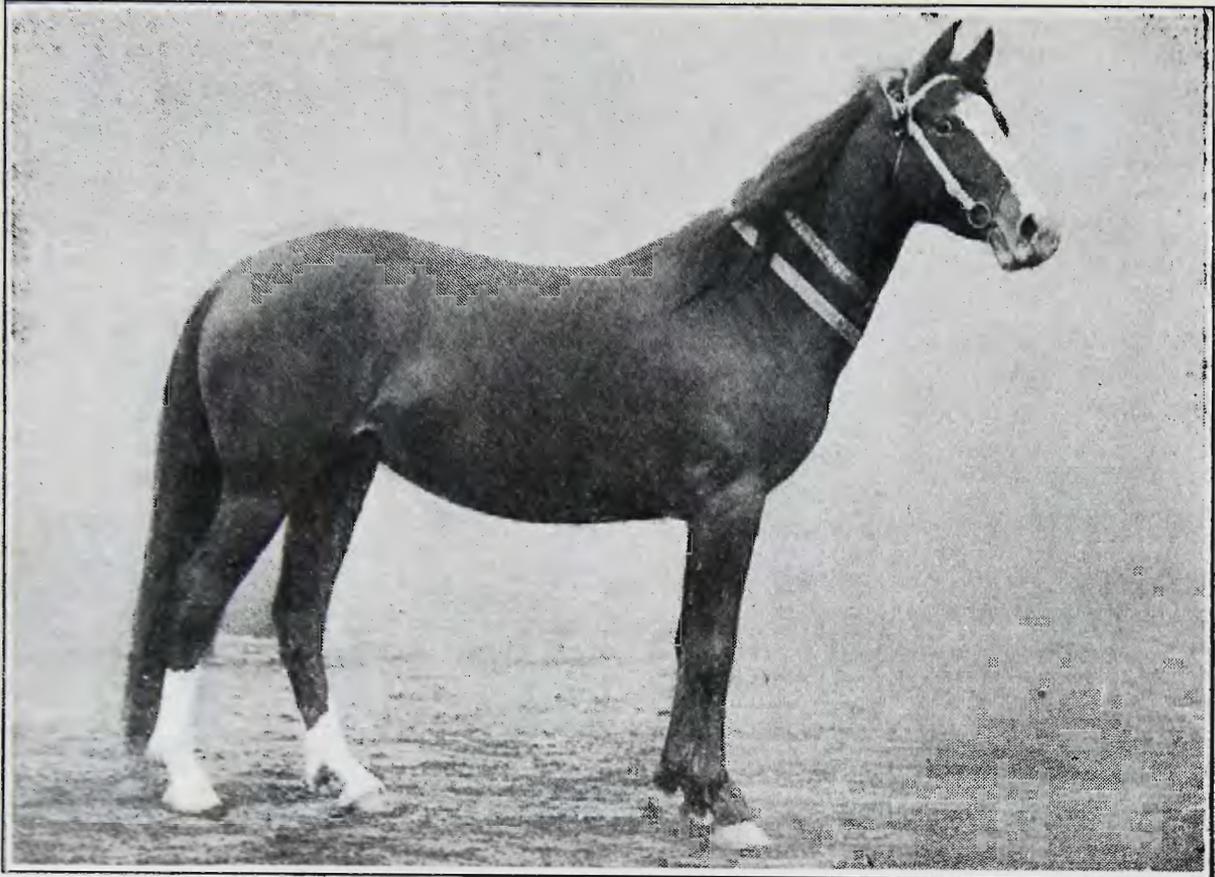

Riding ponies were not numerous. The prize winners were all nice ponies and would probably have won in their respective classes if the exhibits had been more numerous. In the 14 hands and not over 14 hands 2 inches class, only five competitors came into the ring, but they were five beautiful ponies, and any one of them would win in most show yards. The first prize winner in this class gained the champion prize later in the day. In conclusion, I have much pleasure in stating that all my prize winners were sound, and I feel certain that they would pass any strict veterinary surgeon's examination for soundness.

CATTLE.

SHORTHORNS.

W. K. McKinnon, Marida Yallock, Boorcan.

(Complete awards in this Section will be found on page 24.)

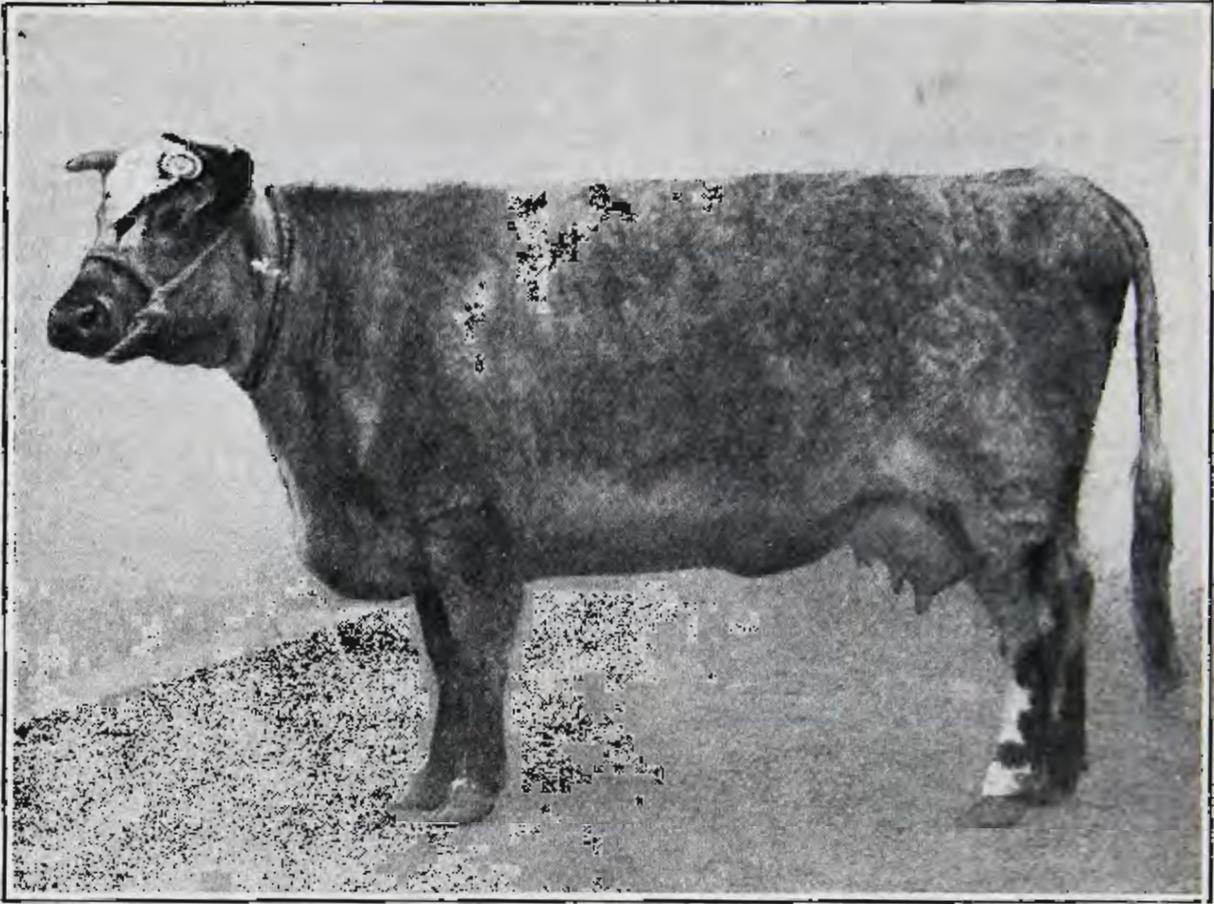

The shorthorn exhibits at the recent Show were numerically less than in former years, and the quality generally not quite up to the standard of recent Shows, one fault particularly noticeable being "weakness of head." The champion bull had most of the characteristics required for our Australian conditions—length, thick and even flesh, free mover, robust constitution and a good head.

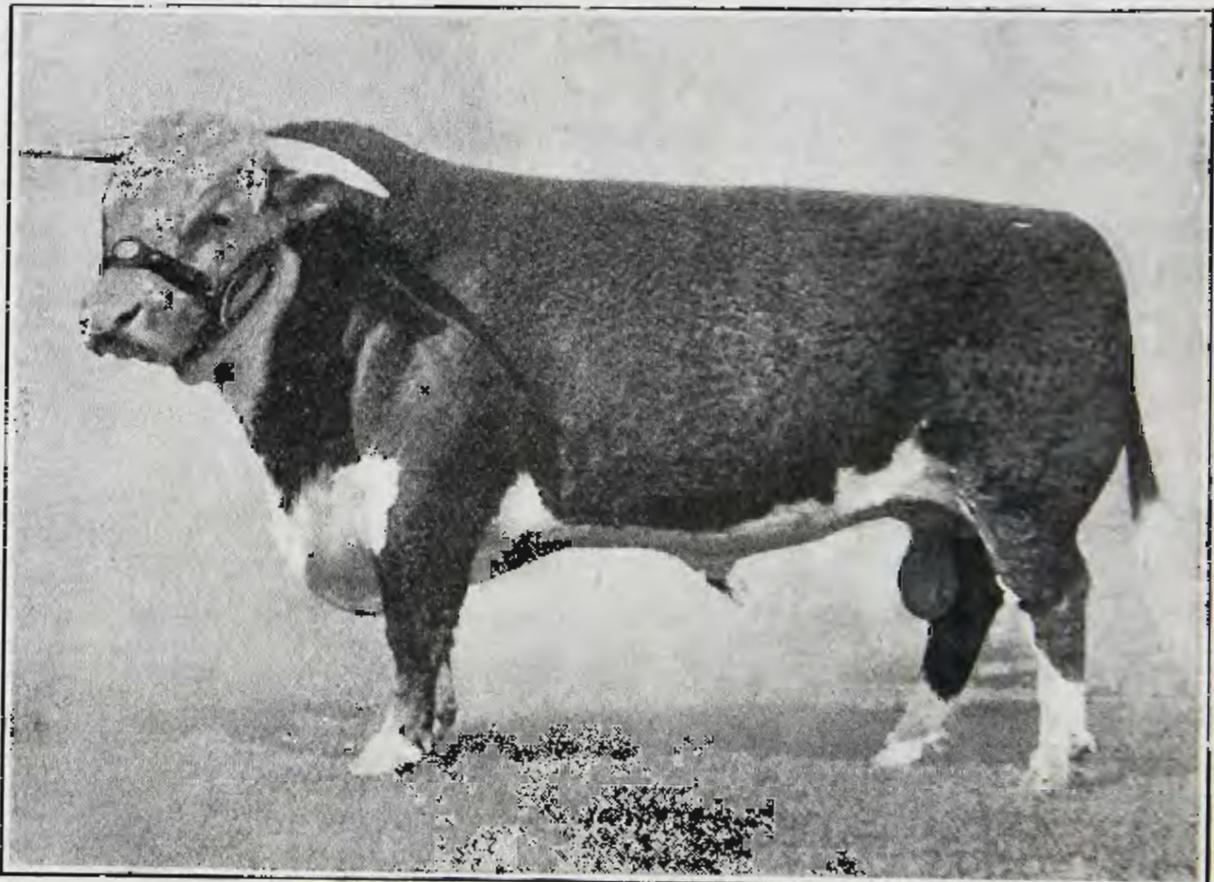

Champion Shorthorn Bull, "Royal" Show, 1922.
"CLIFTON COUNT" (615),
Exhibited by Cain Bros.

For the female championship, two animals of different types stood out, and in making my award, I selected the cow most suitable for our Australian conditions. I was specially pleased to see this animal mothering her own calf. In the younger cattle, the yearling bulls were a good class, both for quality and numbers, and the 18 months and one year heifers were a particularly attractive lot of youngsters, and quite up to the high standard of any previous year.

The group classes, as usual, were filled and formed quite a feature in the section.

Exhibited by Messrs. W. H. Yelland and Sons.

HEREFORDS AND POLLED ANGUS.

D. Forbes, Angaston, South Australia.

(Complete awards in this Section will be found on page 26-27.)

The Herefords were a fine classy lot all through. In the aged bull class, Messrs. Yelland and Son's "Brilliant Boy" stood right out from the others, and on Show day could have held his own with any bull in the Commonwealth. The second and third prize bulls were also very fine animals. In the three-year-olds, "Gisborne Propellor" was first and reserve champion. He is a very fine massive bull, and highly typical of the breed. The second and third prize winners, imported by the Melbourne Board of Works, are two good bulls; the second, if all goes well, will make a name in the show yards in a year or two.

Champion Hereford Cow or Heifer, "Royal" Show, 1922.

"QUEEN LILIAN 6th" (1215),

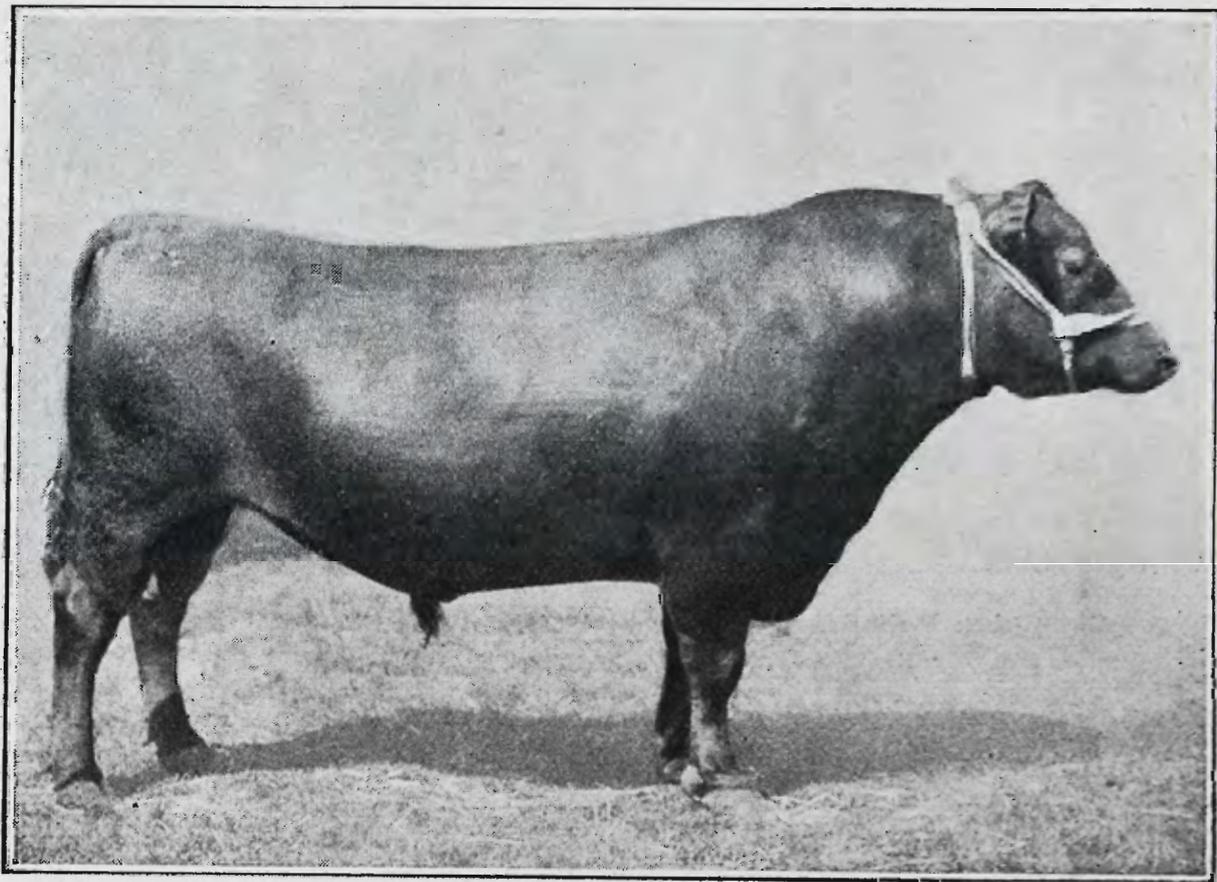

Exhibited by Mr. John A. Beattie.

There were only two entries in the two-year-old class, both owned by Mr. Cook, but they were very decent bulls. Eight one-year-old bulls were exhibited, the first prize winner being a very fine youngster, the second running him very closely for first honors, whilst the third was also very good.

The first prize and champion cow was, I consider, the best I have ever judged in all my experience—she was quite invincible. The second and third prize cows were both very fine. The first in the three-year-old class and the winner of the reserve championship is a beautiful young cow, as was also the second prize cow. Only two two-year-old heifers came into the ring, and there was very little to choose between them, both being fine specimens of the breed, and both imported.

In the yearling class eleven came into the ring. They were a lovely lot of heifers, the first prize winner in this class being a perfect gem. The second prize heifer was a fine youngster, the third being also very good. This was the strongest class in the Hereford Section.

Mr. G. Dair had it all his own way in the Polled Angus Section, there being no competition. All his exhibits were typical of the breed, and the champion bull and cow were very fine animals.

Champion Polled Angus Bull, "Royal" Show, 1922.
"ROVER OF ALBURY" (55),
 Exhibited by Mr. George Dair.

MILKING SHORTHORNS.

J. Gilbert, Orbost.

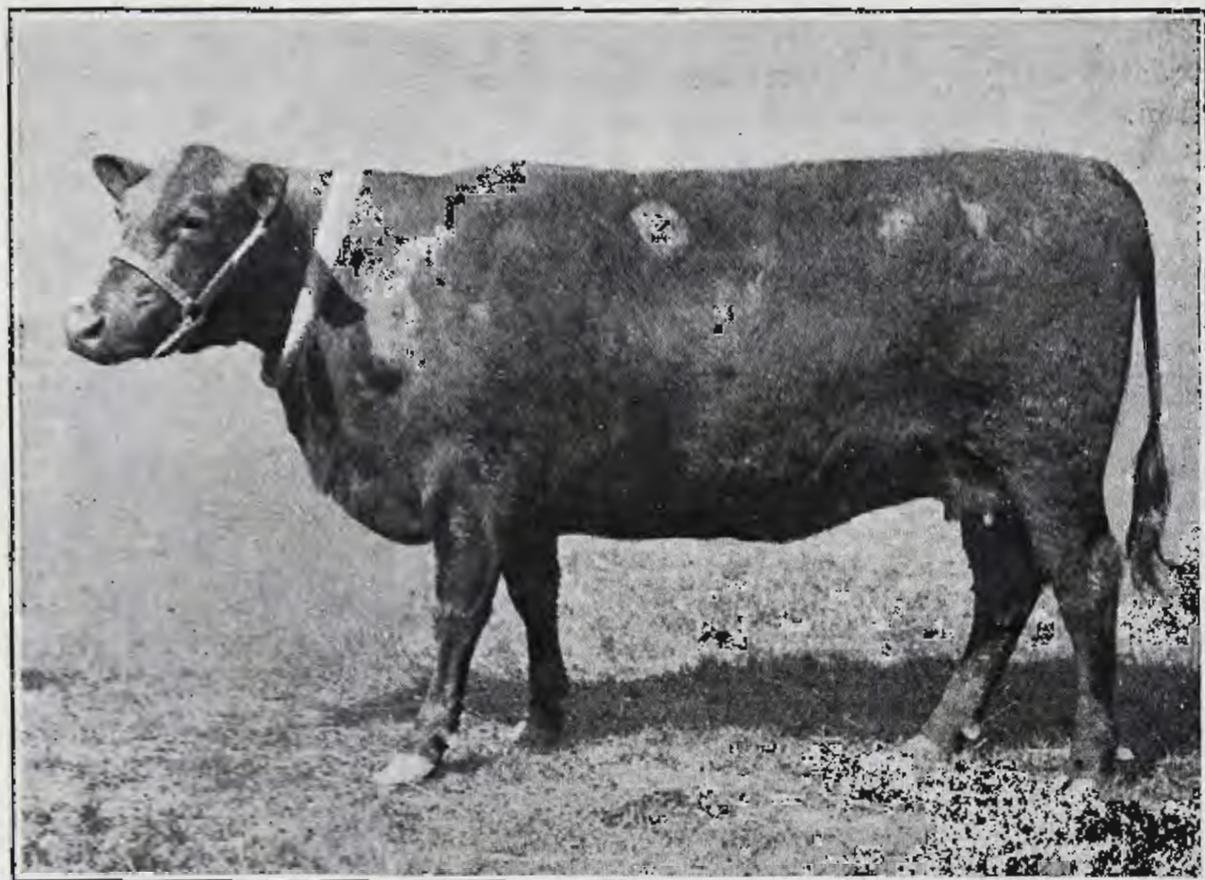

(Complete awards in this Section will be found on page 27.)

The Milking Shorthorn Section contained splendid specimens right through. The quality was well up to average, but amongst the young stock several exhibited a pronounced lack of show condition. The champion bull was an ideal animal of the milking type, showing fine quality and size. The reserve champion was a nice bull, but rather deficient in the hind quarters.

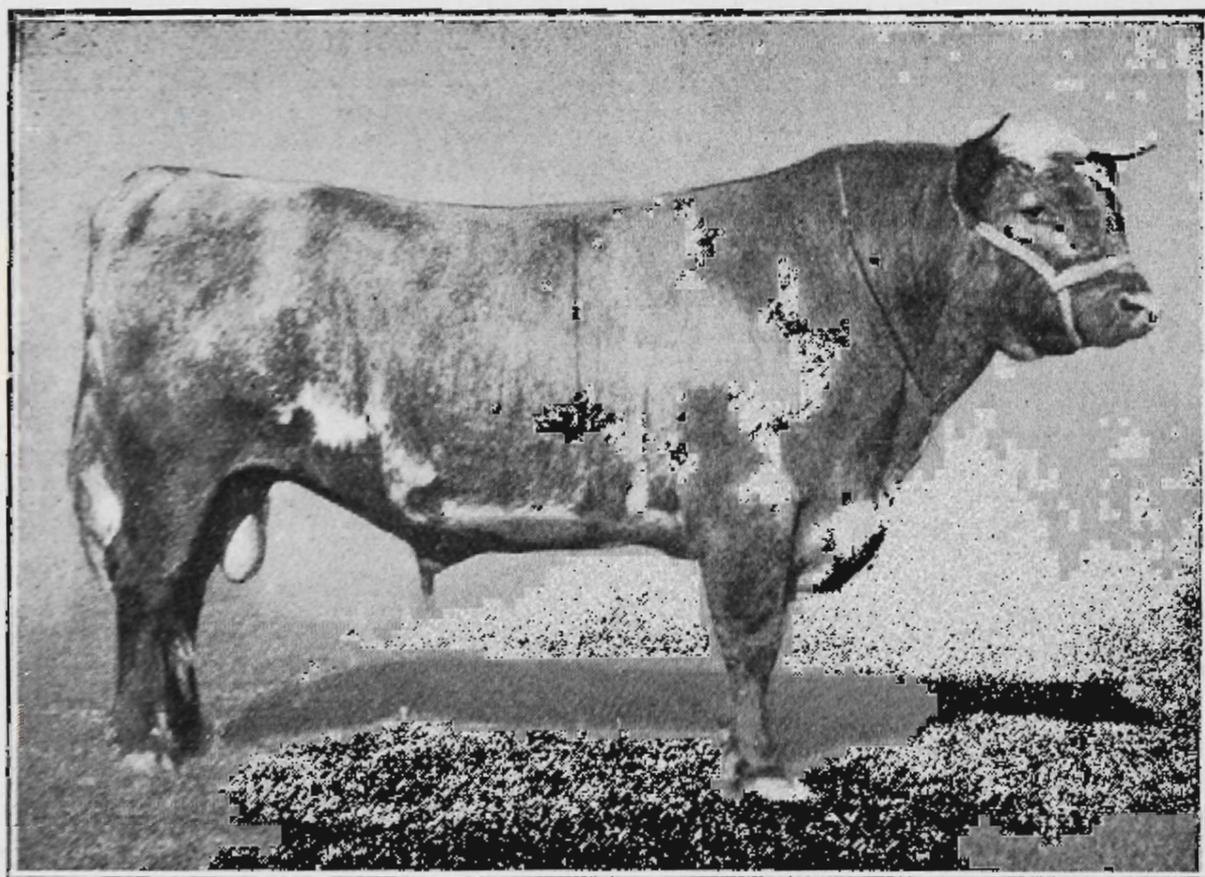

The winner in the two-year-old bull class was of great promise, and showed quality all over. The second was of nice quality also, but of lighter type.

The champion cow was of beautiful type, though a little weak in the head. The reserve champion, though of very nice type also, did not show to advantage through being dry.

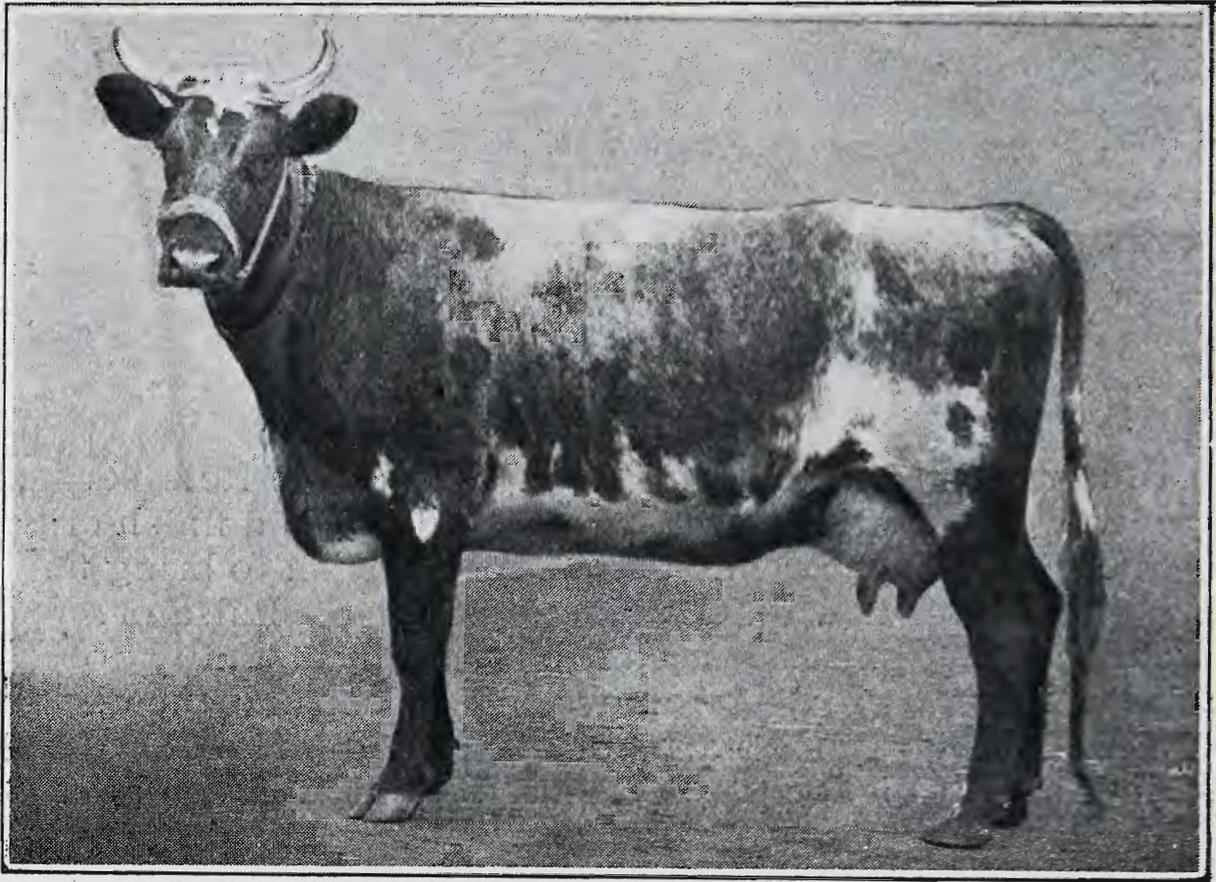

The winning three-year-old heifer in milk showed exceptionally good quality all over, especially in the udder and teats.

"PEARL ROAN 3rd,"

Exhibited by Mr. James Lidgett.

RED POLLS.

John Baker, Karong, Gheringhap.

(Complete awards in this Section will be found on page 28.)

The aged bull class was good, as was also the three-year-old class. The champion was a very fine animal. The yearling class was not too good, but possibly equal to that of other years in quality. The aged cows were not up to usual standard, but in the younger classes some fine beasts were shown, especially in the yearling class, so in the future, or for a few years at least, the older classes in the females should be better.

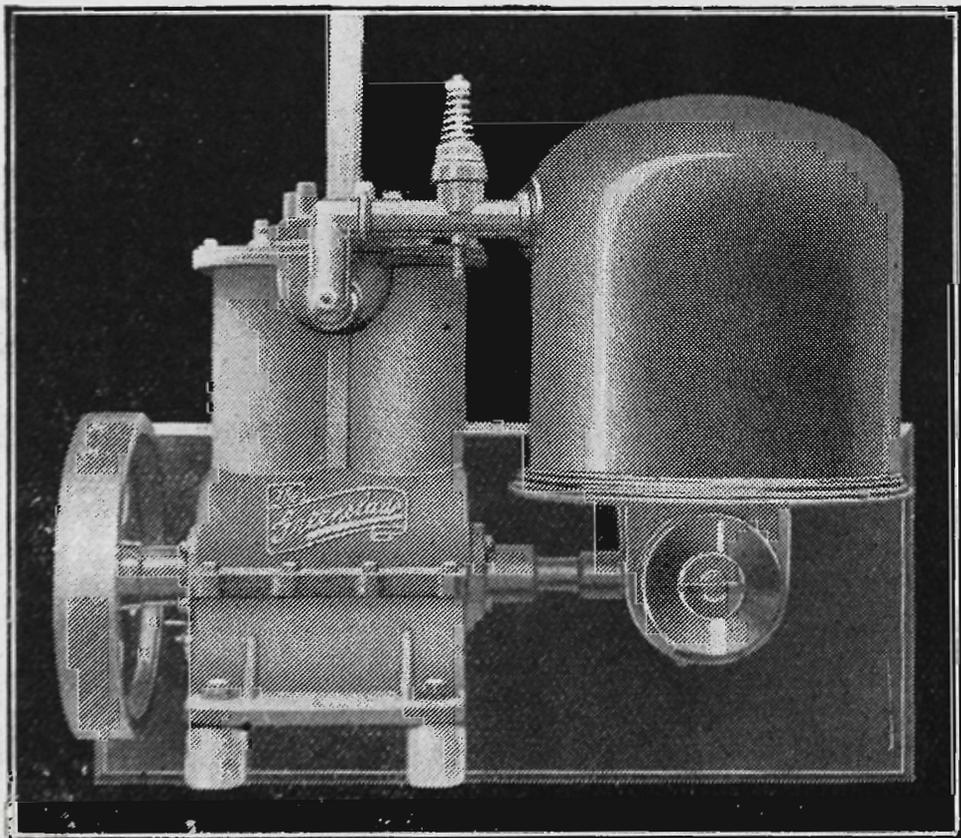

“Greenslade”

MILKING MACHINE.

The Illustration of the Vacuum Pump and Dome Releaser here shewn will give some idea of the compactness and finish of this Machine; but the part which we specially wish to bring under your notice is our new quick adjusting Variable Pulsator. With this device the pulsations can be varied instantly to suit each cow in her turn. It removes all reason for the distrust which so many Dairy-Farmers have had of the ordinary Machine, as with it the gentlest possible milking can be done.

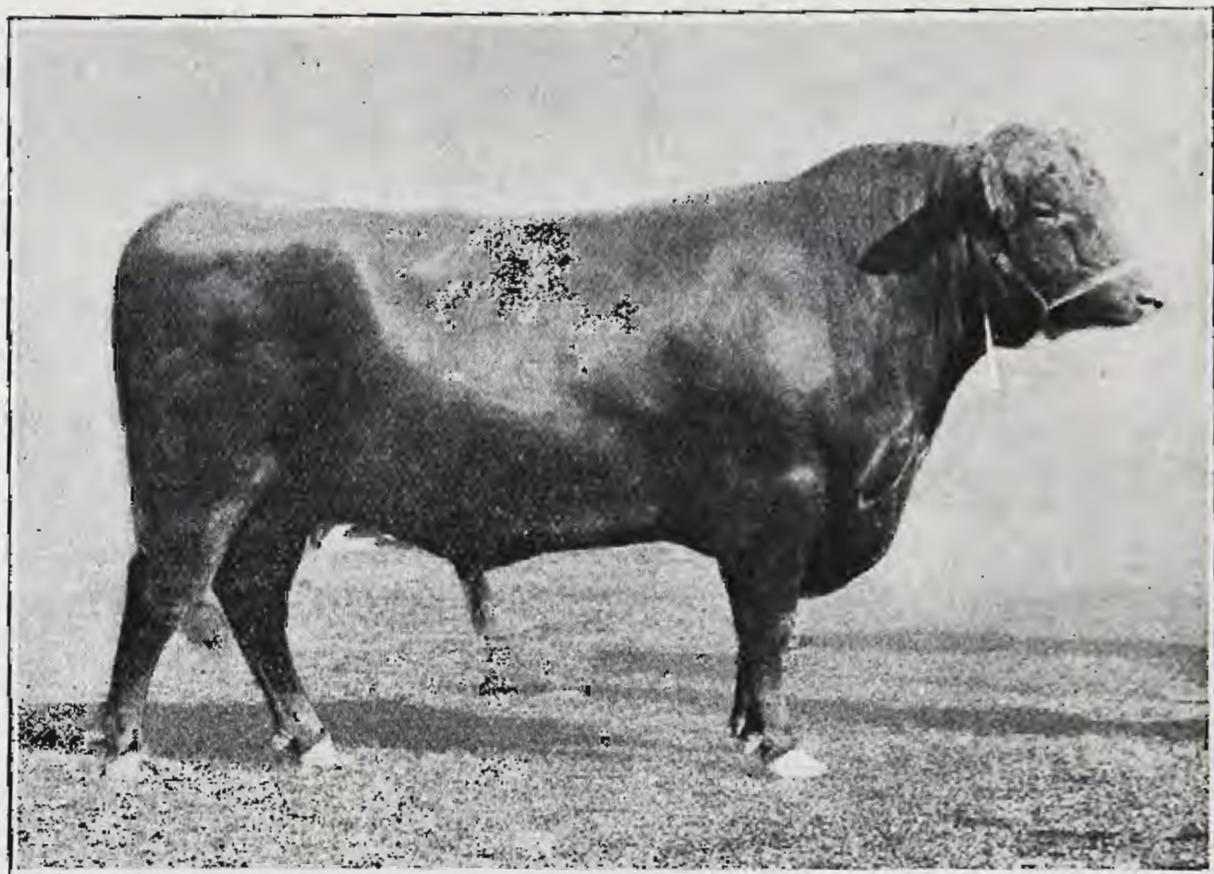

The January issue of the “The Australian Farm and Home Journal” contains illustrations and further details.

At our Office 380 Bourke Street (4th floor), a Machine can be seen working, and we invite all interested to call and see it.

AYRSHIRES.

C. Stewart McIntosh, "Denbigh," Cobbity, N.S.W.; H. R. Gillett,
"Bell Park," Newton, Geelong West.

(Complete awards in this Section will be found on page 29.)

Taking the cattle on the whole, the numbers and quality were far before anything I have seen at any other show, and were, in my opinion, quite up to the standard of last year's Melbourne Royal. The aged Ayrshire class, in milk, was hardly up to the standard of last year; we, therefore, had to select the champion and reserve champion from the dry classes, which contained some very fine animals. An outstanding fault I noticed in many of the females, was that their udders were not wide enough, nor came up behind far enough, and it would be wise for some breeders to select bulls from

Champion Ayrshire Bull, "Royal" Show, 1922.
"SCOTTISH HERO OF GOWRIE PARK" (2207),
Exhibited by Messrs. W. P. Brisbane and Sons.

dams which had this point well developed. I think that, as a rule, a good wide escutcheon means a good wide udder behind, and I noticed that many cattle at the Show had almost no escutcheons. One fault many dairymen find with Ayrshires is that their teats are very often small; but this fault was not very noticeable. To maintain the Ayrshire as an ideal dairy cow, breeders should try to get good producers with good teats. Herd testing will, no doubt, assist in this direction, but the general appearance of a good dairy cow must also be the object of a breeder, as many badly shaped cows may be good producers, but bad to breed from.

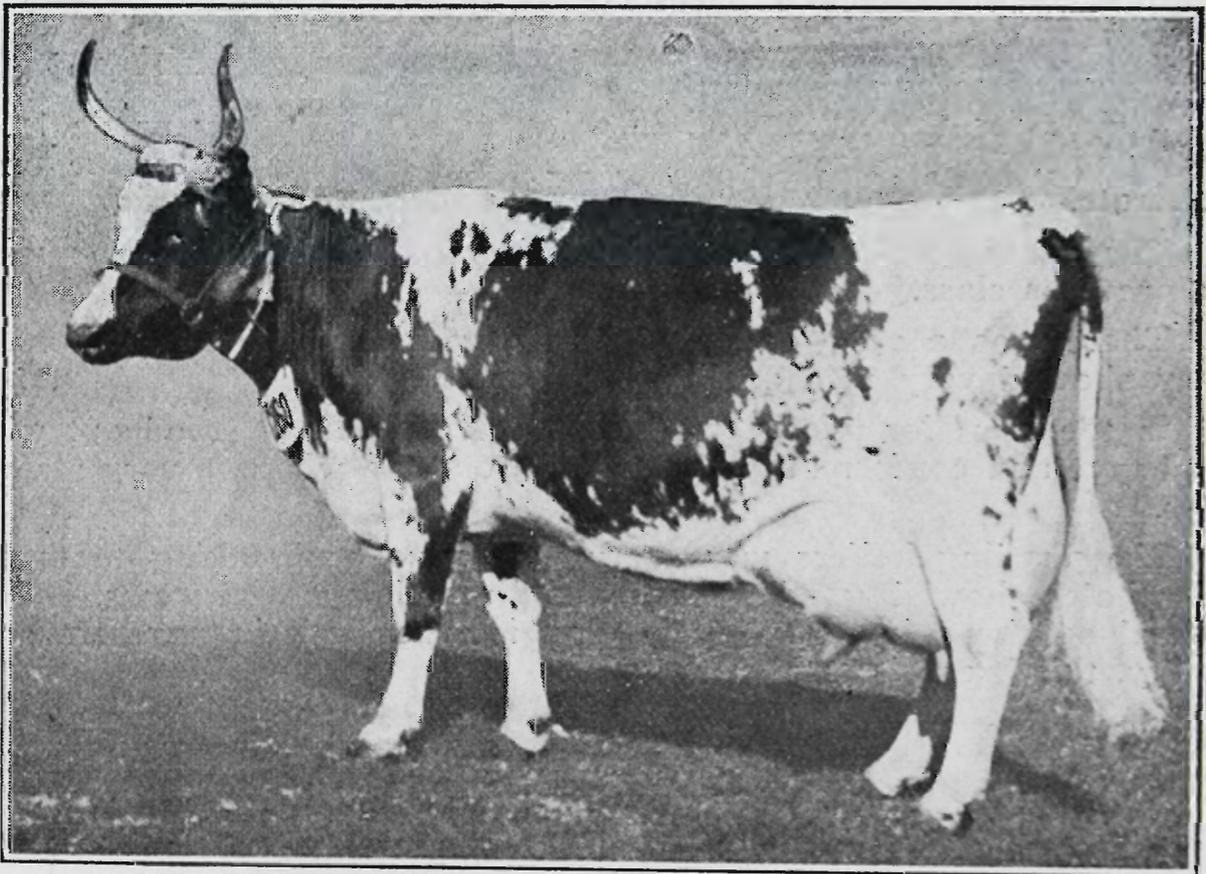

The champion bull is a typical animal of his breed, and his appearance in the ring would be very hard to beat. The reserve champion is also a very fine bull, and in a year or so may be in the lead. There are, no doubt, many other bulls that were not in the prize list that would be first-class sires.

AYRSHIRES.

H. R. Gillett, "Warendra," Claremont-avenue, Newtown, Geelong.

(Complete awards in this Section will be found on page 29.)

The female classes, right through, were well above the average, both as regards quality and numbers, there being plenty of evidence that the breeders are aiming at productiveness as well as type. They are to be congratulated upon sending so many fine exhibits into the ring. The aged classes were a very even lot of females, and there was very little to choose between them. Both the champion and the reserve champion females were hard to fault, both as regards Ayrshire type and for milking qualities. There were some good specimens amongst the younger classes which will be heard of at later shows.

Champion Ayrshire Cow or Heifer, "Royal" Show, 1922.

"POPPY OF BEN KELL" (4584),

Exhibited by Mr. R. Ralston.

The males, collectively, were not so good as the females, although there were some very fine animals amongst them—notably the champion and reserve champions. The former was shown in great trim, and he carried himself like an aristocrat. Both these animals should produce the Ayrshire we all admire so much.

I would like the Council to consider the advisability of judging the yearling classes on the morning of the second day, as it is a big job to get through in the allotted time, and I think no harm would be done to exhibitors if a start were made at 9.30 a.m.

JERSEYS.

D. Kenny, Hill Crest, Balwyn.

(Complete awards in this Section will be found on page 30.)

The aged bulls were very good in type and conformation, and, in my opinion, an improvement on last year's exhibits. After taking out the first three or four three-year-old bulls, the balance was lacking in quality. The class for two-year-old bulls was a fairly even one.

Among the yearling bulls there were many lacking in type, but the first three or four were quite up to the usual standard.

The aged cows were to my mind the best that have ever been exhibited in that class. Every animal showed type and utility.

The five-year-old cows in calf were also very strong, and comprised a lot of very useful animals.

The class for cows four years old, in milk was an easy one to decide, as the prize winners stood out. The class for cows four years old, in calf, was rather weak.

The heifer three-year-old, in milk, class was not a particularly strong one. The prize winners were good, but the rest were only moderate.

The three-year-old heifers in calf were on about a par with the previous class.

There was a very good class of two-year-old heifers, in milk. They showed very nice quality.

In the class for two-year-old heifers, the winners stood out with good type and conformation, but it was, on the whole, a very strong class.

The yearling heifers were very numerous, and, taking them on the whole, showed good promise of becoming useful cows. My general opinion of the Jersey Section is that, both in numbers and quality, this breed is on the up-grade.

GUERNSEYS.

M. O'Callaghan, The Rialto, Collins Street, Melbourne.

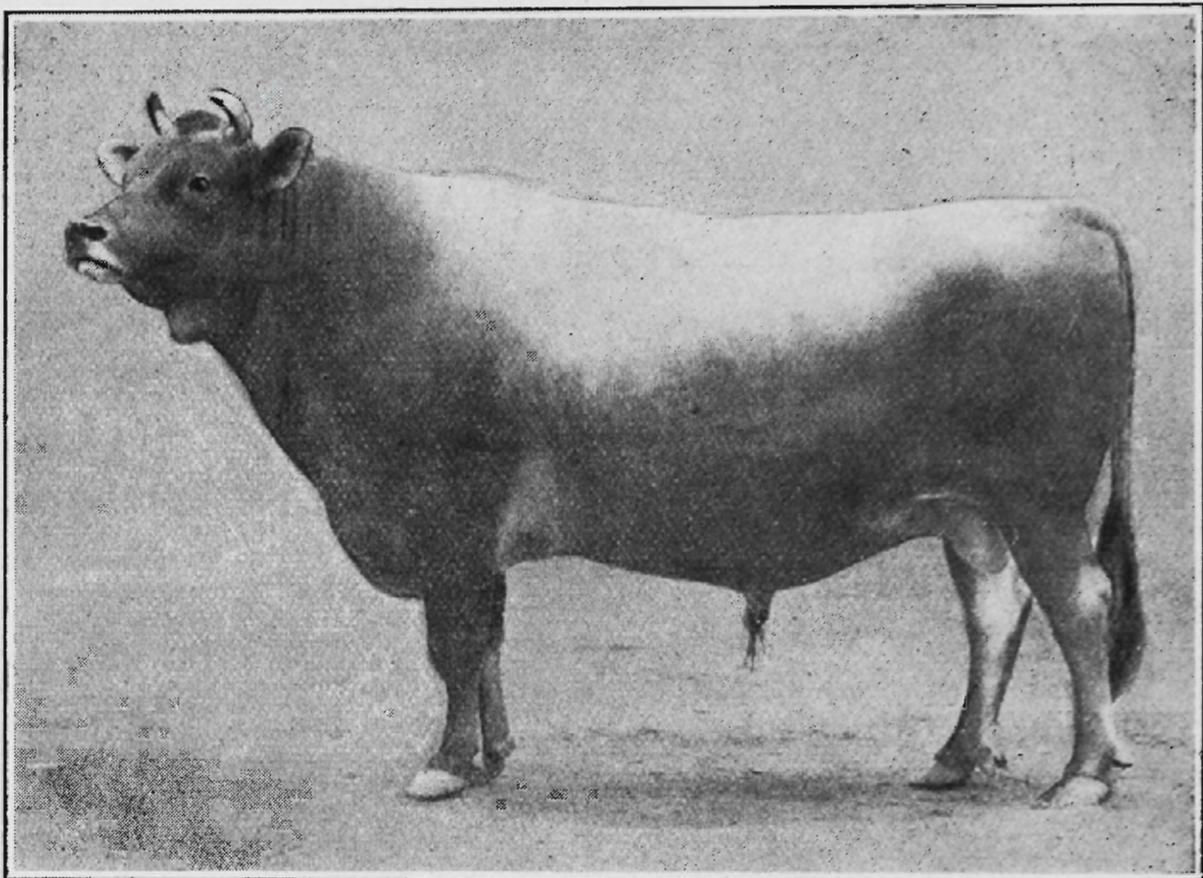

(Complete awards in this Section will be found on page 31.)

Judged with the best specimens of this breed of cattle at Sydney Shows, the Melbourne Show suffered badly by comparison. This was due, no doubt, to the fact that the breed is not well known in Victoria, and that Melbourne is too far away for any of the most enterprising New South Wales breeders to compete.

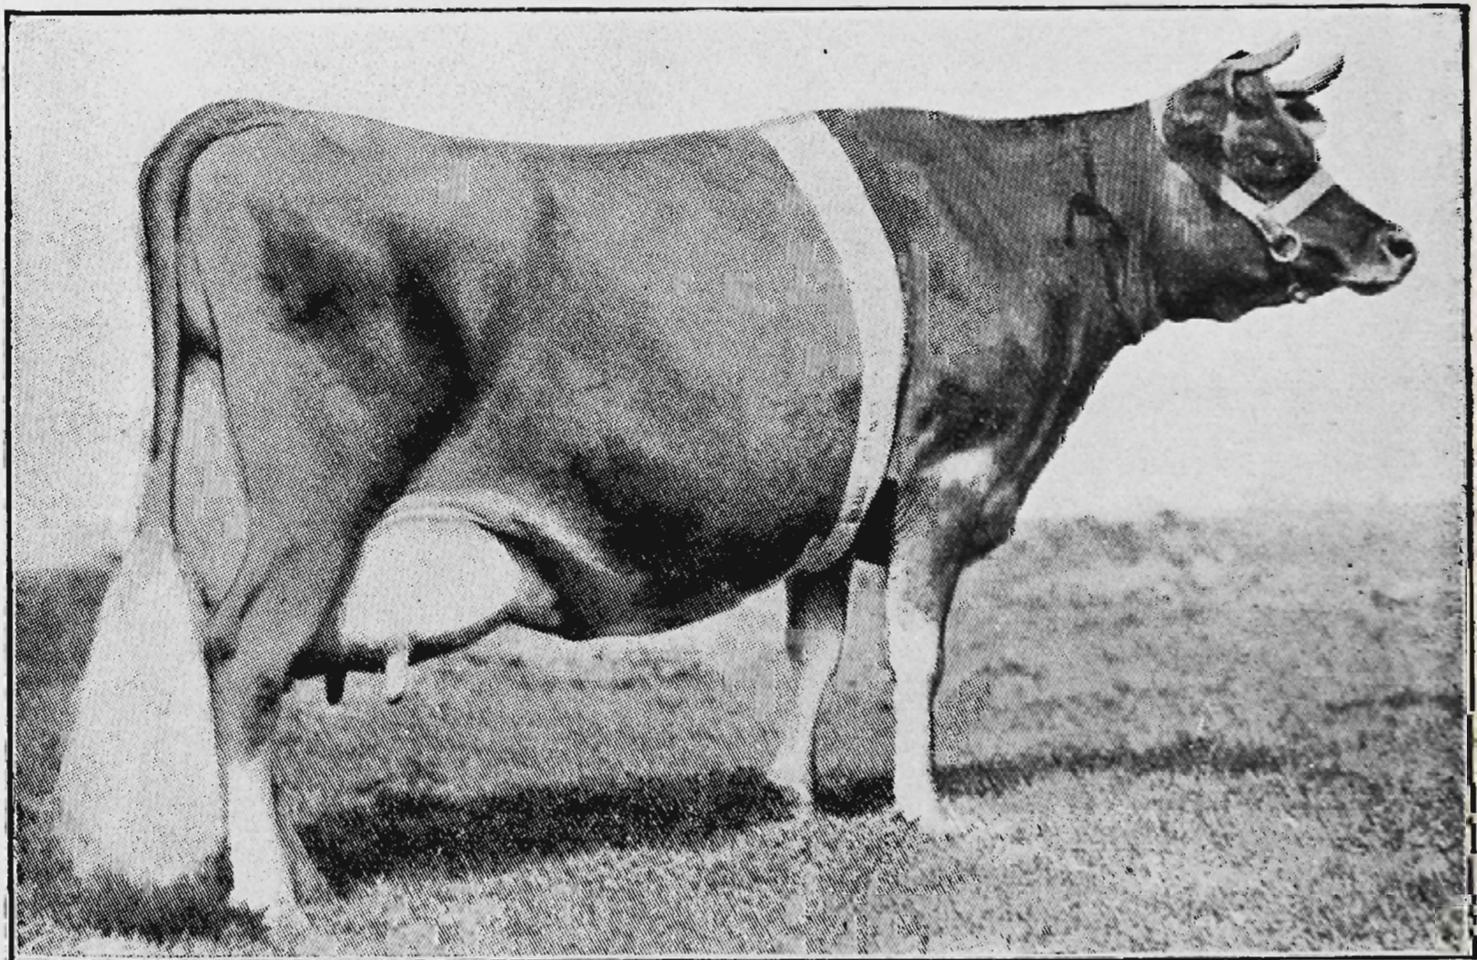

The aged cows, though fairly represented, were not high-class, if we exclude one specimen shown by Mr. Anthony Hordern, that obtained first prize in her class.

Mr. Payne's imported bull stood out for type and quality, but he is getting too old for show purposes.

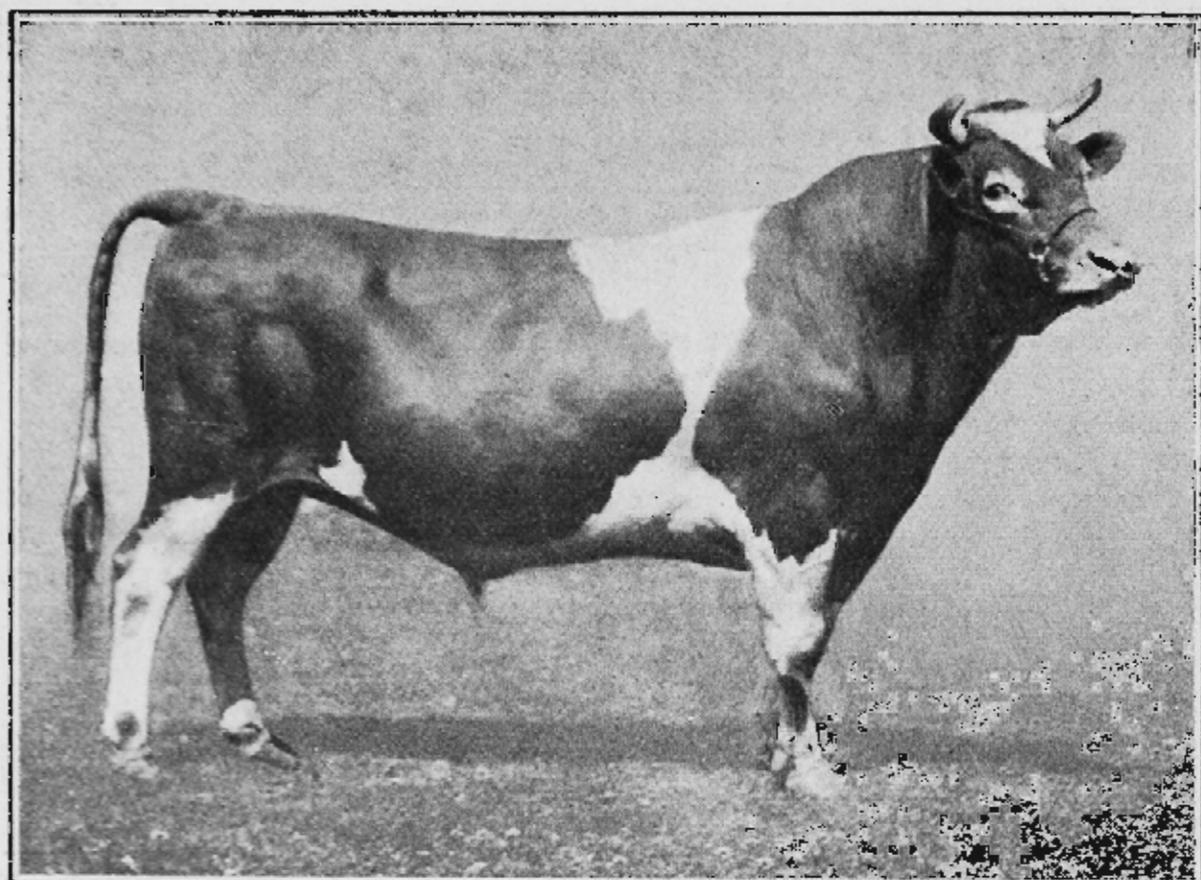

In the young heifers' class, a few promising specimens were brought out, and it is hoped that the breed will become more popular, as it certainly deserves to do, judging by the records which have been put up by Guernseys in New South Wales, as well as in America and in other parts of the world.

"THE WEEKLY TIMES" CHAMPION BUTTER FAT TESTS.

P. R. Scott, Department of Agriculture, Melbourne; R. A. Barr,
Department of Agriculture, Melbourne.

(Complete awards in this Section will be found on page 33.)

The number of cows competing in "The Weekly Times" Champion Butter Fat Test was thirteen, the breeds represented being the Jersey, Ayrshire and Friesian. The returns were not so good as those obtained last year, as only three cows returned a total of over six lbs. of butter fat. The winner, "Werribee Starbright 9th," a Jersey, gave a total of 160 lbs. 9 oz. of milk, testing 4.91 per cent. of fat, yielding 7.888 lbs. of butter fat. Incidentally, this is the highest yield obtained so far in this competition. The second cow, "Dominion Segis Fobis," a Friesian, was third in this test last year. This cow gave the highest yield of milk, 195 lbs. 5 oz. testing 3.81 per cent. of fat, yielding 7.442 lbs. of butter fat. The third cow, "Golden Noble Duchess," a Jersey, was the winner last year. This cow gave a total of 110 lbs. 5 oz. of milk, testing 5.72 per cent. of fat, this being the highest test recorded in this competition, yielding 6.276 lbs. of butter fat.

As showing the variation in total yield of butter fat, the range extended from 7.888 lbs. down to 4.179 lbs. We are pleased to record that interest in this test was very much in evidence.

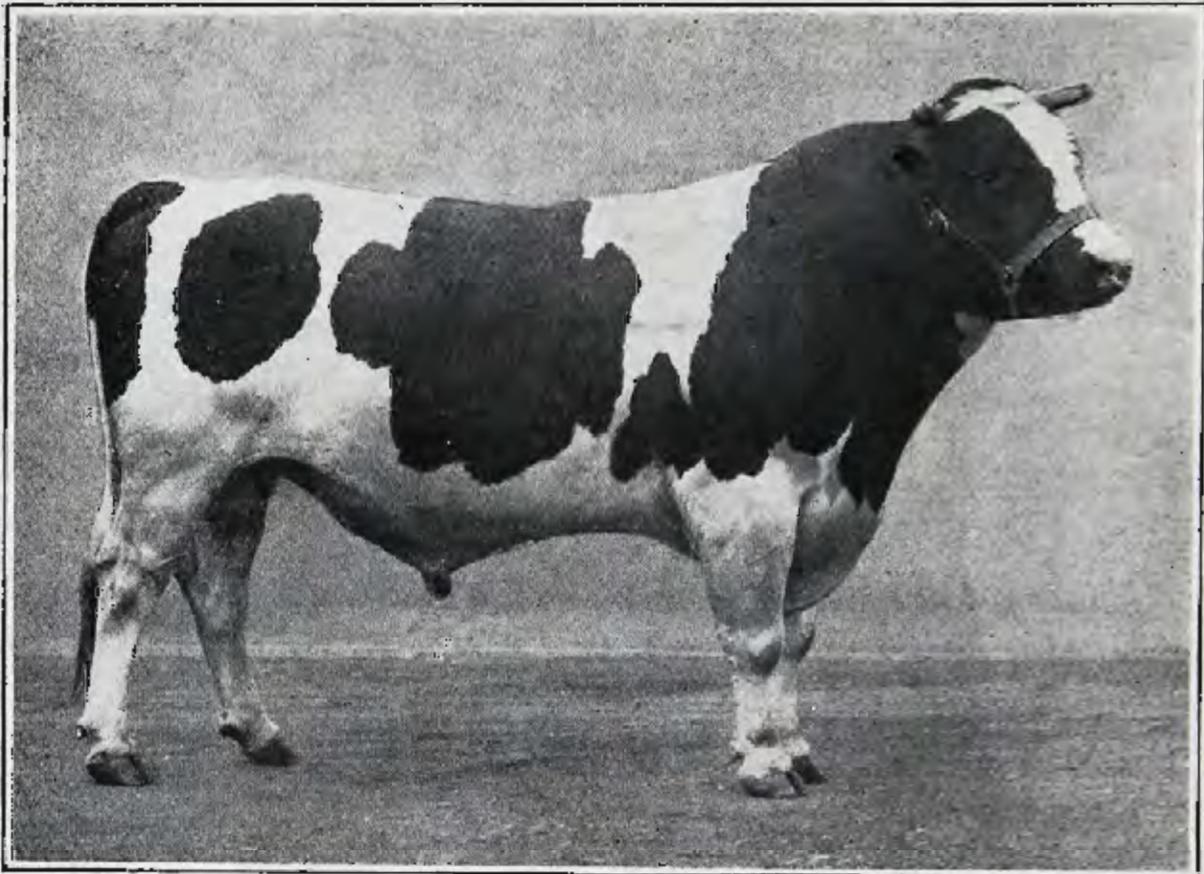

The number of cows competing in "The Weekly Times" Champion Butter Fat and Milk Test was thirteen, the breeds represented being the Jersey, Ayrshire and Friesian. The yields were, generally speaking, good. As might be expected, there was a wide margin between the highest yield, 160 lbs. 9 oz. of milk yielding 7.888 lbs. of butter fat, and the lowest 89 lbs. 8 oz. of milk, yielding 3.623 lbs. of butter fat. The winning cow, "Werribee Starbright 9th," returned a milk value of 12s. 4½d., which was considerably higher than that of the second cow, "Golden Noble Duchess," which returned 9s. 7d. The third cow, "Excel of Gleneira," returned 9s. 5½d. The difference in the value of the milk yield between the second and third cows is very slight, representing only one halfpenny and a fraction per day. The other competitors all gave a monetary value in excess of the average dairy cow.

FAT CATTLE.

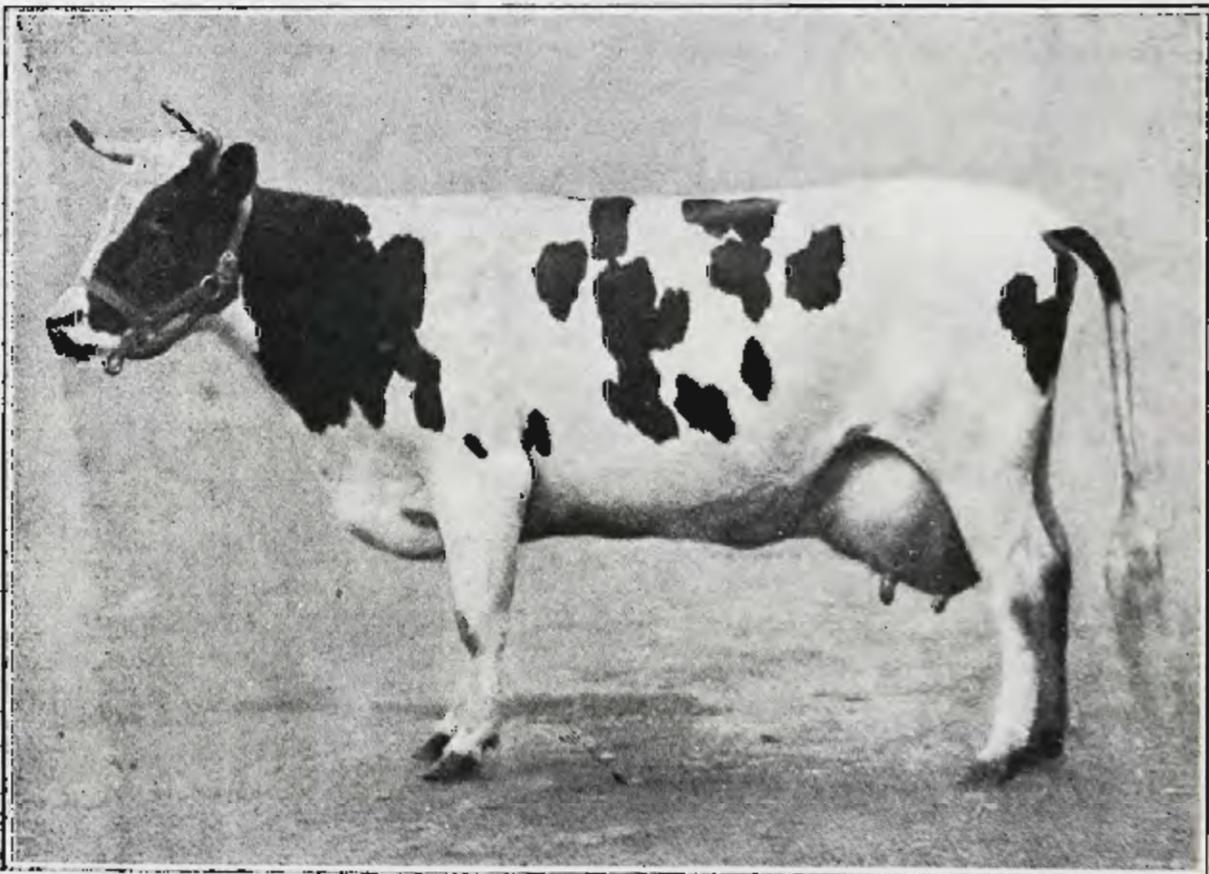

John Robertson, "Ythan," Epsom Road, Kensington.

(Complete awards in this Section will be found on page 34.)

The winners in the class for a pair of fat oxen, any age, were two good Shorthorn bullocks of fair quality. In the pair class for animals bred by exhibitor, the winners were two exceptionally heavy Shorthorns. One of these bullocks was of very good quality, considering his enormous weight. This exhibit also received a special prize. For the pair of fat bullocks of four years or under, the winners were of very fair quality. The winner in the class for one-year-old steer or heifer was a very well-grown steer, and of very good quality. In the cow section there were some fairly good exhibits. I think it would be well to advise exhibitors to be most careful in regard to the age of the young cattle they exhibit. Taking the exhibits of fat cattle as a whole, I consider that they were only fair this year, and could not be compared for quality with those shown in 1920.

SHEEP.

LINCOLN RAMS.

R. A. D. Hood, Merrang, Hexham.

(Complete awards in this Section will be found on page 34.)

The rams this year were a fairly even lot. The classes were not as large as in previous years, but there were fewer inferior sheep brought out. The rams, on the whole, were well grown. Most of the

Champion Lincoln Ram, "Royal" Show, 1922.

Exhibited by Richardson Bros.

breeders are now going for the right style of Lincoln wool, showing good character and lustre. I think I have judged better individual sheep at previous shows, but consider the section as a whole, contained a very creditable lot of exhibits.

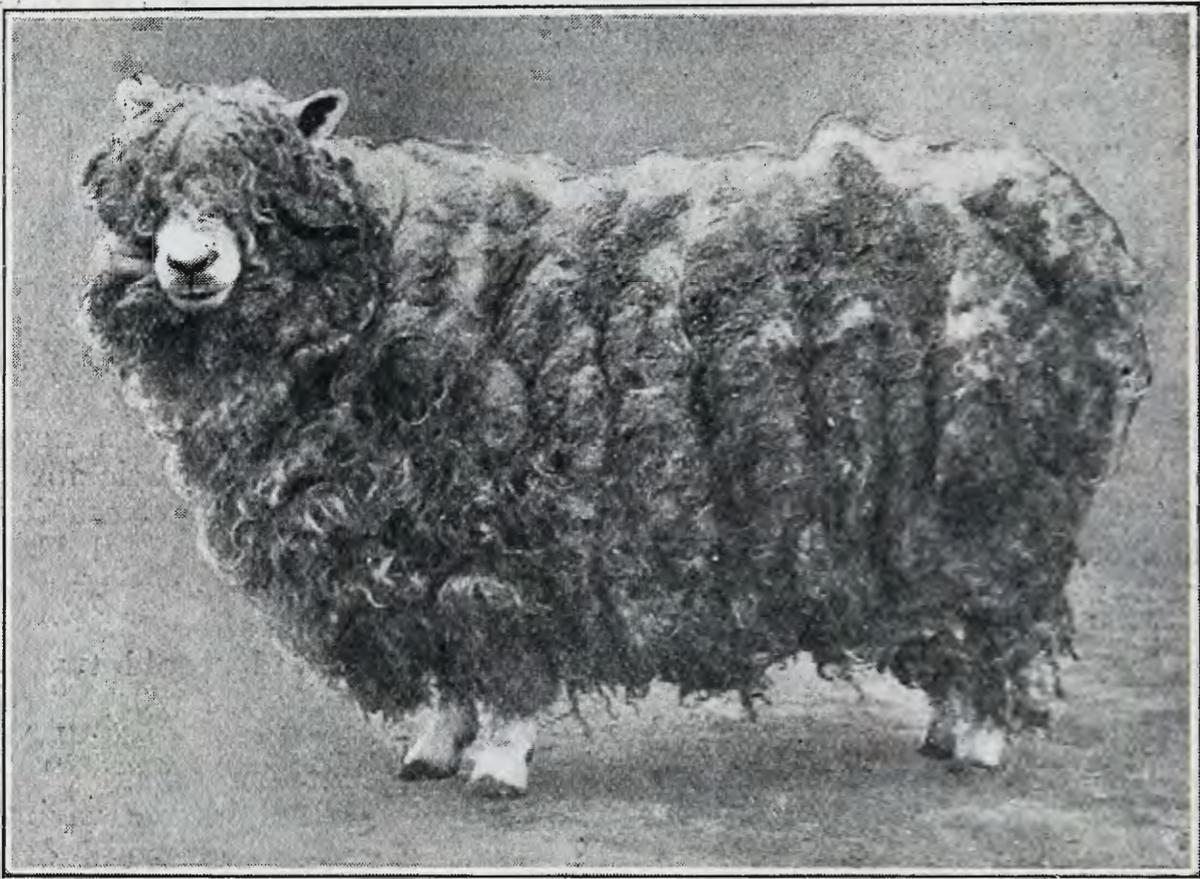

The students whose work I judged showed good promise, and a very good knowledge of what is required in a Lincoln sheep.

LINCOLN EWES.

W. H. Skilbeck, Koroit.

(Complete awards in this Section will be found on page 34.)

The Lincoln ewes presented for judging at the 1922 Show, though not so numerous as the preceding year, were, on the whole, superior in quality. The class for ewe with lamb at foot brought out some very nice ewes. The class for 2½-year-olds brought out

**Champion Lincoln Ewe, "Royal" Show, 1922.
Exhibited by Richardson Bros.**

some of the best ewes it has been my privilege to judge. The first and second prize winners were almost perfect, and as good as breeders are likely to get. They also secured the champion and reserve champion prizes. The 1½-year-old ewes were also a good lot. The first prize winner was a particularly good one. For ewes under 1½ years old, some fine specimens were shown.

ENGLISH LEICESTERS.

W. Adams, Barfold.

(Complete awards in this Section will be found on page 35.)

The number of sheep was below that previously judged by me, but the quality was much improved. A better standard would result if a combination of different types did not occur. Two different types were plainly seen in the champion ram and the champion ewe. As far as I know, the ram was a Harrison and the ewe a Bakewell type. Both were good sheep—each being kept to its own type. The Bakewell type has a tendency towards too short a carcass, which could be remedied by using a sire of greater length, being of course of the same type. The wool, generally, showed the true English Leicester character.

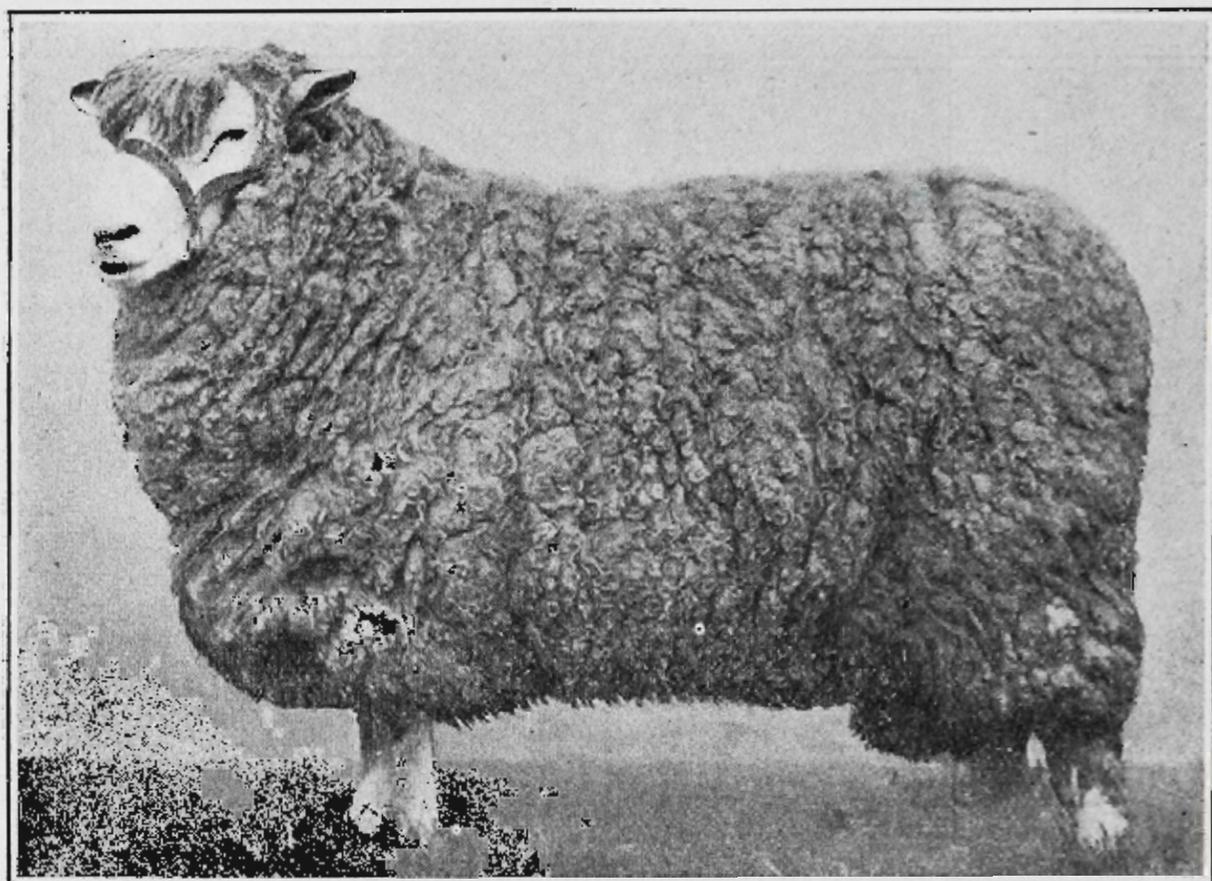

BORDER LEICESTERS.

J. A. Cochrane, Aitkenside, Ceres, Geelong.

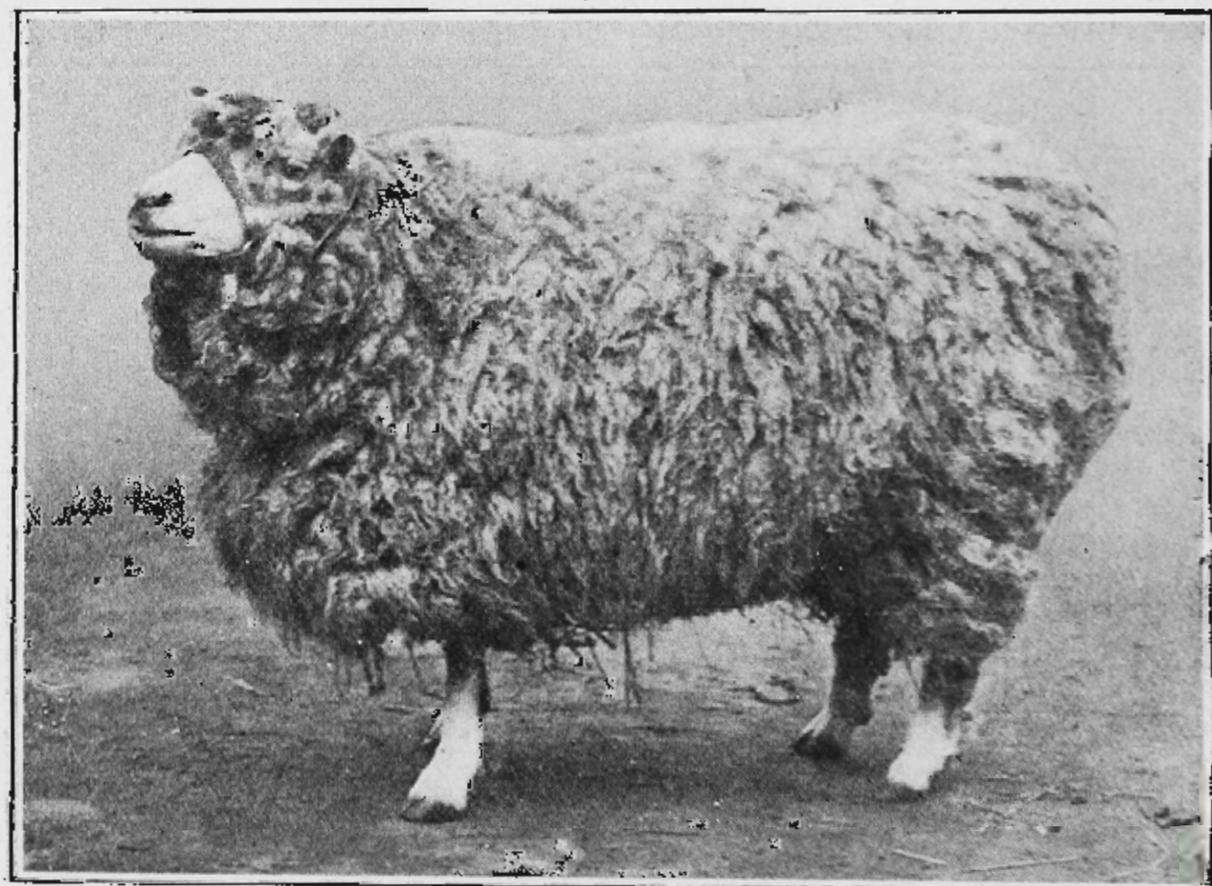

(Complete awards in this Section will be found on page 35.)

The number of exhibits in the Border Leicester Section was the largest ever seen at a Melbourne Royal Show, or, in fact, at any other show in Australia, and the quality of the exhibits was never better. In fact, I believe there was never a more aristocratic lot of exhibits of Border Leicesters at any show. At least, there were four exhibitors who had entries of descendants in 10 classes out of 11 of a ram named "His Majesty" (2317), bred by Mr. John Mark, of "Sunnyside," Scotland, and sold at the Kelso sales about 15 years ago for £120 to Mr. J. R. C. Smith, of Galalaw, and resold two or three years later when he was five years old for £170. "His Majesty" was then considered the best sire in Scotland, and all the leading sires were by him. Most of the prizes at the recent Show went to this ram's descendants that were exhibited in the various classes. If they did not get a first, they either got a second or a third prize.

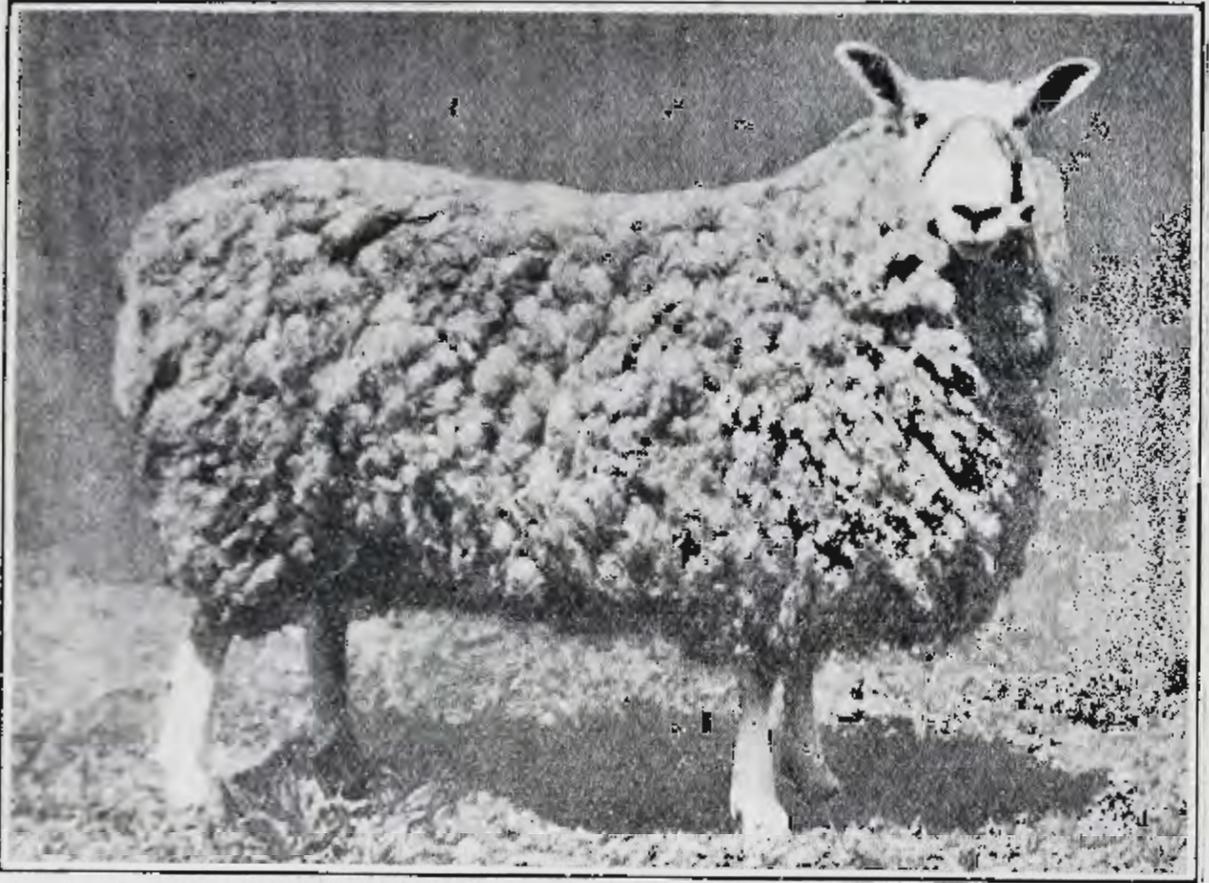

The special prize in the sires' memorial class and the reserve championship, and all the first prizes except one (which was second and winner of the sires' memorial) in the five classes for rams, went to descendants of "His Majesty." The five prizes I awarded in the pen of two rams under 1½ years' old, out of 17 entries, went to descendants of the same ram. After spending much time since the Show going over the Flock Books and what information I could gather, I can now quite understand the difficulty I had in making my awards in some classes where there were several entries (exhibited by different owners) of this noted sire's blood, for they were so even and hard to separate. My awards confirmed the high reputation held by the leading breeders in Scotland, of this ram as a producer of great sires that have impressed their progeny so much two or three generations ahead.

Exhibited by Mr. Henry Hodge.

ROMNEY MARSH.

R. H. Rose, Grass Vale, Burkeup, W.A.

(Complete awards in this Section will be found on page 36.)

I beg to report a great improvement in the exhibits in the Romney Marsh Section, when comparing them with the 1920 Show. I found, almost without exception, that all the exhibits were of the Elham type and very uniform, and in almost every class competition was very keen. The aged rams were a very fine lot, with good heads, large bone, and carrying nice crimped wool and with good backs. The five ewes led out for the championship were as fine a lot as I have ever seen. They were all true Elham type, with good heads and covering a nice wool, and good strong bone. In the utility classes there were some fine sheep. They came in well grown, with the wool in good condition, considering they had never been hand fed or trimmed. The way the sheep were turned out in all of the classes was a credit to the exhibitors.

CORRIEDALES AND POLWARTHS.

J. Tilley, Aringa, Port Fairy.

(Complete awards in this Section will be found on page 36.)

The Corriedale and Polwarth sheep were of a very fine class, and certainly improving each year. There is no doubt but that they will soon become a general flock sheep, seeing that they are adapted to all classes of land. Many farmers favour them, as they are of a docile nature, and have good frames, with a nice class of saleable wool.

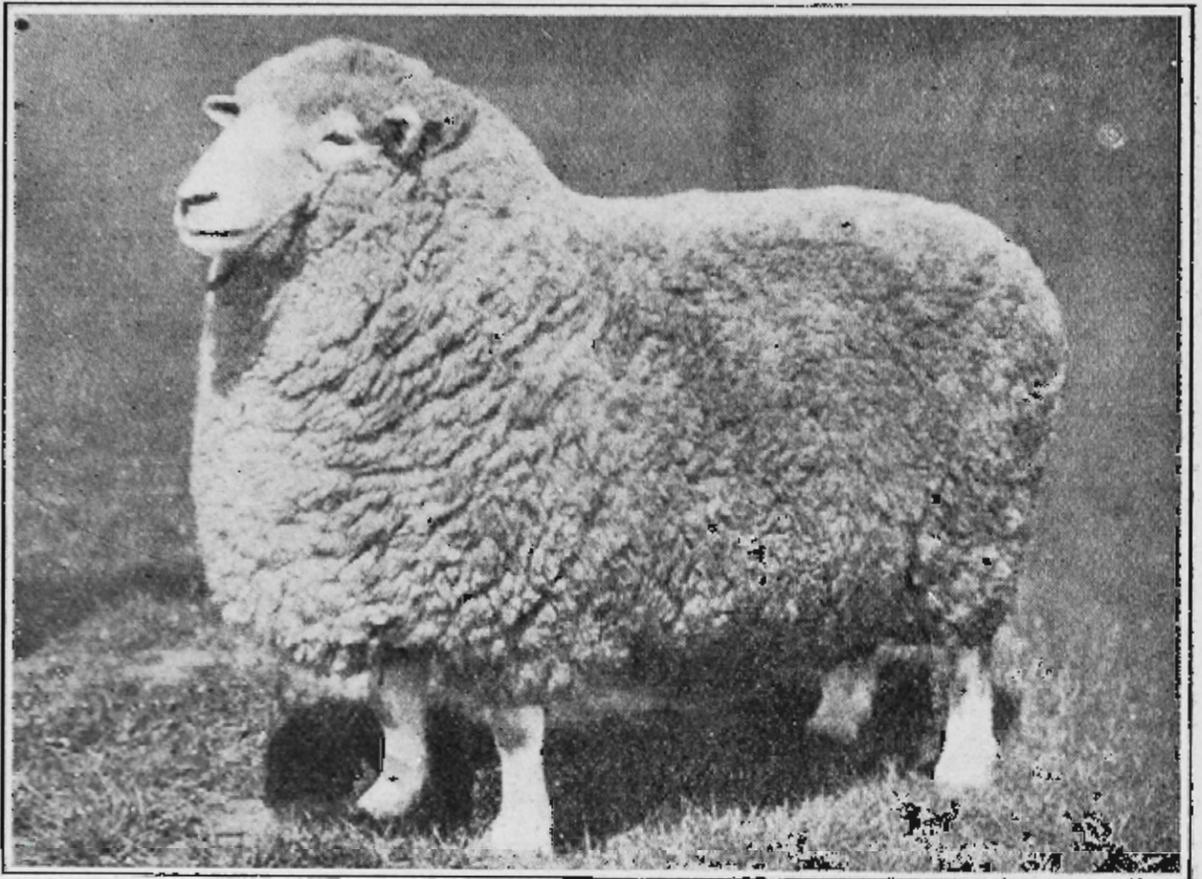

SHROPSHIRE, SOUTHDOWNS, SUFFOLKS
AND DORSET HORNS.

D. Porter, Glenorchy.

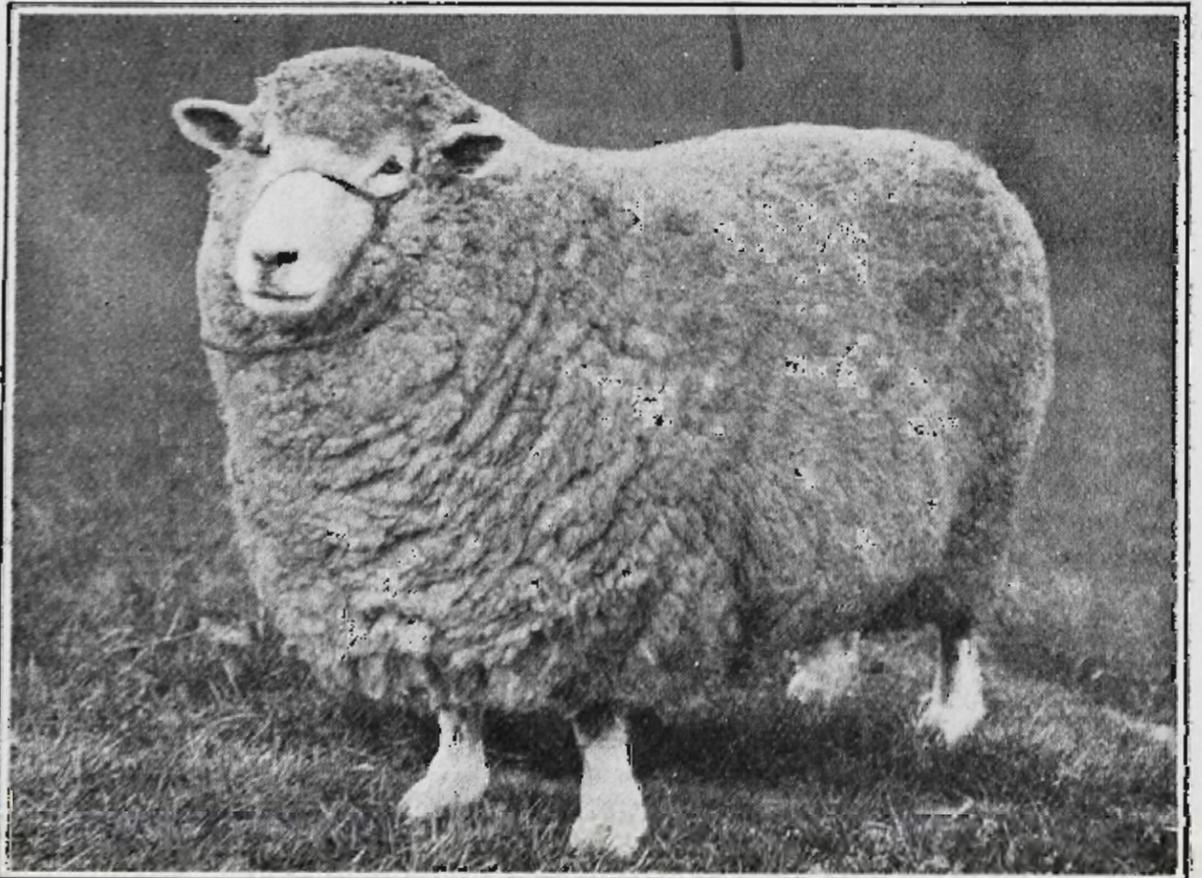

(Complete awards in this Section will be found on page 37-38.)

Shropshires were much better, both in numbers and quality than has been seen at the Royal for many years. The champion aged ram was a very solid typical sheep, and the young rams were especially good. The ewes also were well up to the usual standard with some exceptionally good sheep amongst them. Southdowns, both in numbers and quality, were a good even lot, competition being keen throughout. The winners were really typical sheep.

The competition in the Suffolk Section was limited, there being only two competitors. The sheep were an even lot, but with two or three exceptions, were not shown with quite the same condition as at some former shows. Dorset Horns, I am pleased to say, were something exceptional. In fact, they were an eye-opener as to what this breed is capable of producing as mutton sheep. Although entries were not numerous, competition was keen, with very little between the winners. This breed deserves every encouragement, as I consider they would produce first-class lambs.

“Vallo” Dipped Wool Secures Highest Price at Sydney Wool Sales

*Dulvay, Boorolong
Armidale (N.S.W.), 6th September, 1922.*

Dear Sir,

Please book our usual order for “Vallo” Powder Sheep Dip, for delivery to Exmouth railway platform about the middle of October, and advise us the day same is being despatched.

We are well satisfied with “Vallo” Dip and consider it quite equal to the best procurable . . . We have been using this dip now for three seasons, and, as you know, we were credited with the honour of securing the record price--viz., 34½d. in the Sydney market last year, thus this is evidence of the satisfactory qualities of the dip.

We have no hesitation in recommending it to others who have not already given it a trial, feeling sure that they, too, will be well pleased with results.

Yours faithfully, ARCHER BROS.

FAT SHEEP.

A. Stevens, 35 Clifton Street, Richmond.

(Complete awards in this Section will be found on page 39.)

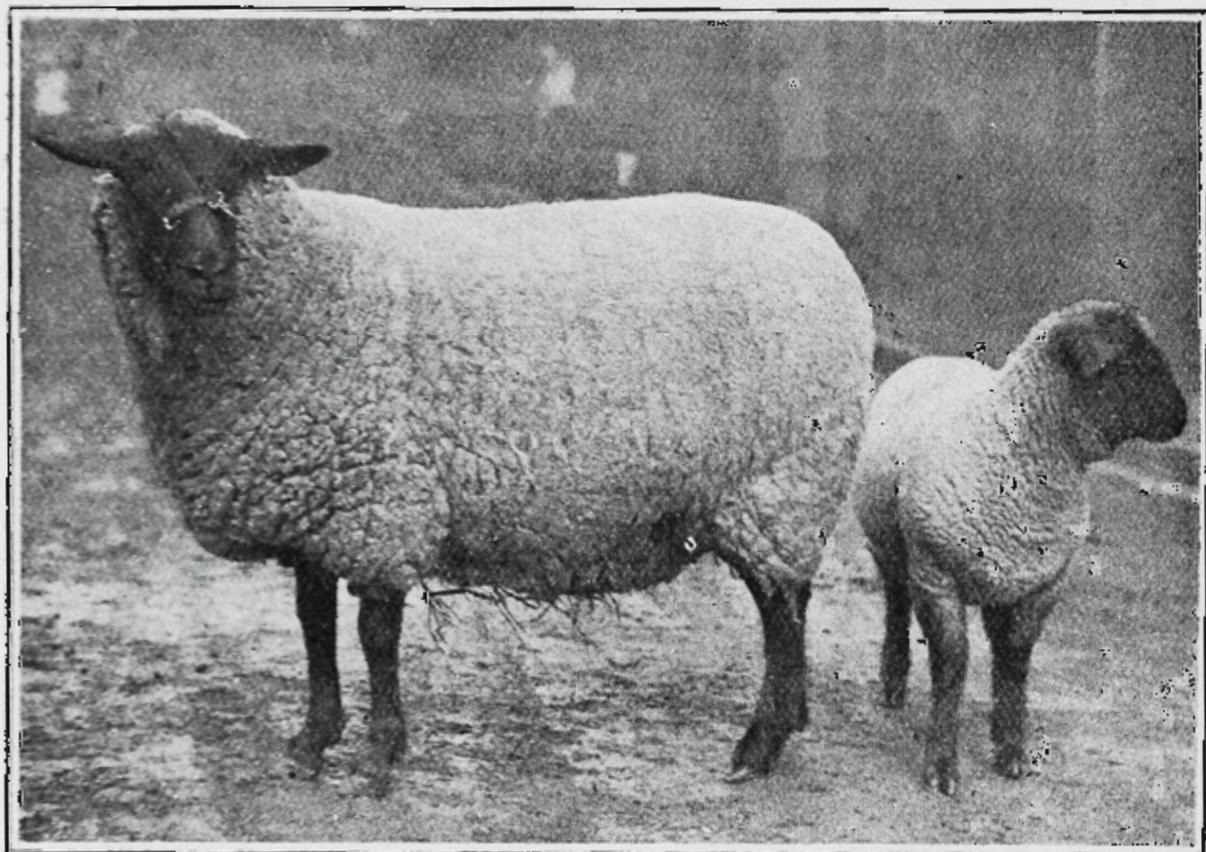

For numbers and quality, the fat sheep were equal to any previous show. Specially good exhibits were the first and second prize fat crossbred wethers, the first and second prize Merino wethers, also the whole of the export freezing lambs. The crossbred and Merino wethers in the latter were perfect. Every export lamb was a first grade lamb, both for weight and quality. The competition in this class was very keen, and I was put to a severe test in awarding the prizes. The export sheep class was not up to the same high standard, and I suggest a weight limit to be put on in this class. Several pens in the fat sheep class were more suitable for export than the prize-takers in the pens for export. The fat ewe section was below the average of previous years in number and quality.

SWINE.

YORKSHIRES AND TAMWORTHS.

D. Stewart, Hazeldene, Trafalgar.

(Complete awards in this Section will be found on page 41.)

In the class for aged Yorkshire boars, a fine lot was brought forward, and the prize winners were very fine indeed, the first prize boar being an excellent animal, showing even quality throughout. The second prize pig lost points on account of its feet being too close together behind. The third prize boar was very nice also, but a little coarse in the neck. Several other nice pigs were noted in this class, but they were not quite up to standard of the winners. In quality and type, boars fifteen months old and under, were not quite up to standard of the "aged boars," but some fine animals were paraded. The first prize boar was a pig of good type, being well grown and well developed for his age. The second and third prize winners were both good, but not quite so typical as the winner. In this class the quality dropped very quickly after the prize winners. A large entry of boars nine months old or under was received. Some good specimens were exhibited, but some of the others ran down to very indifferent quality. The first prize pig, one of the finest young boars I have seen, showed plenty of quality, and should be heard of again. The other placed pigs were also very nice, and should mature into first-rate specimens of the breed. In the class for boars four months old and under, a large entry was received, and, taken right through, the class showed good type and quality, pointing to the fact that breeders are following the right lines to secure the best results.

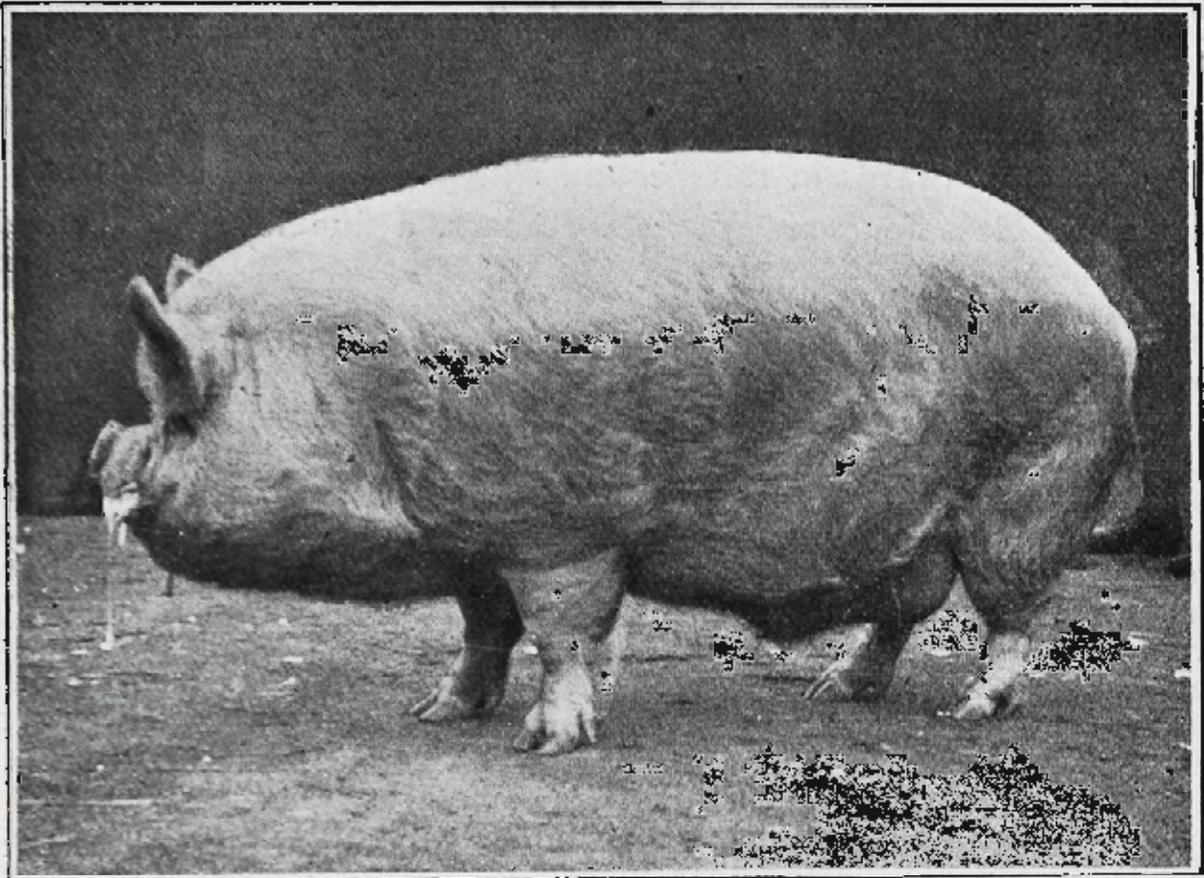

A fine entry in the sow and litter class was received, and the majority of the exhibits were a great credit to their breeders, the balance falling off very quickly in quality. The first prize sow and litter were of the best in quality that has been shown, though the sow was rather on the small side, but she had no other faults. The litter was very even in size and quality. It was undoubtedly a very nice exhibit.

The type and quality of the aged sows was the true Yorkshire, but the first prize sow stood out above the others. She was an excellent animal indeed. In the class for sow, fifteen months old or over, we always expect to see the exhibits at their very best, as at this age the pig is in its best bloom, and there is no doubt that the first prize sow in this class bore out this statement. She was a beautiful sow, typical of the breed; head, ears and hair good, and of the best shape in the pavilion. The second and third prize sows were also very good, and reflected great credit on their breeders. The youngsters exhibited in nine and four months' classes showed excellent prospects of future development, and with careful handling and care should, at future shows and in the breeding pens, worthily uphold the best traditions of this popular breed.

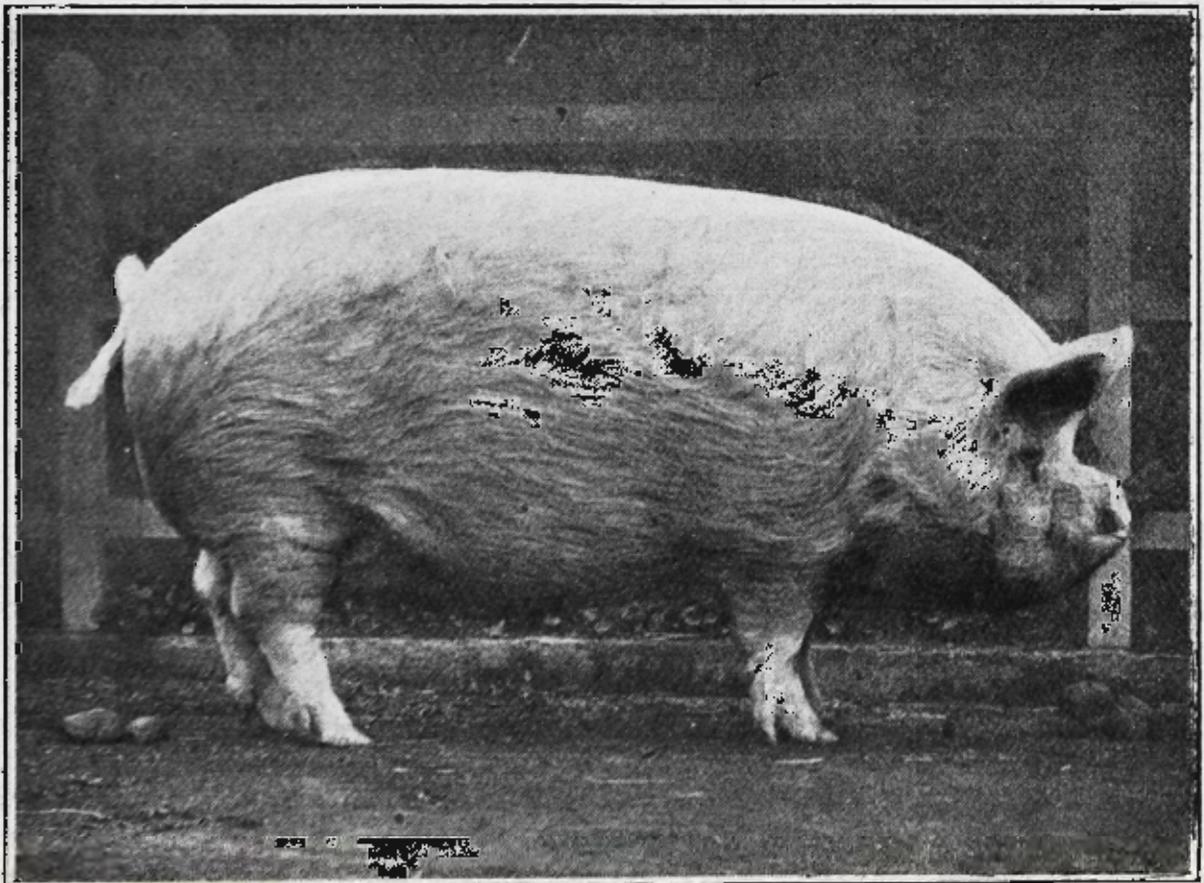

Tamworths were, as usual, few in number. They are no doubt a good breed of pig for bacon, as I notice in the market they bring top prices for bacon and store pigs. The first prize boar and sow were the finest I have seen in the show at any time.

Large Yorkshires are another class that is poorly represented, and not so good this year as formerly.

A number of the pigs shown in the various classes showed too much pug nose, and were also faulty in their legs and feet.

BERKSHIRES.

P. J. Miller, 410 Neil-street, Ballarat North.

(Complete awards in this Section will be found on page 40.)

The aged Berkshire boars constituted a fine class of the real Berkshire pig, the three prize takers in particular showing plenty of length and quality. The boars under 15 months were a moderate lot, excepting the three prize-takers. These were splendid samples of the real Berkshire, and showed plenty of length and quality. They were splendidly marked, and had good ears and plenty of vitality. The rest seemed as if they were exhibited for sale. The same can be said of the six months old and under class, excepting three or

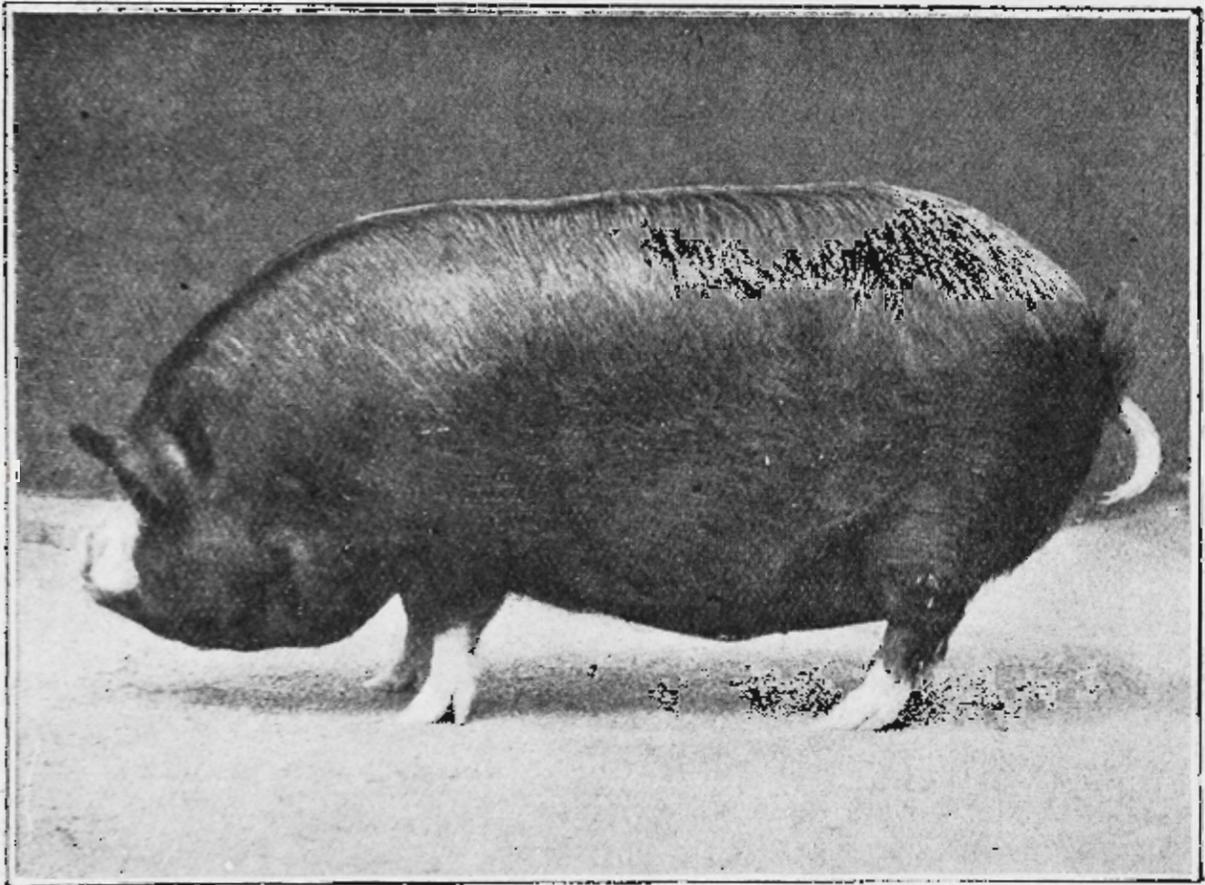

Champion Berkshire Boar, "Royal" Show, 1922.

"GOOMALIBEE COLONEL" (4089),

Exhibited by Mr. A. C. Stewart.

four of the exhibits which showed out prominently. The aged sows were a splendid lot, and I have never seen better, and I feel sure that these would hold their own in any show in the world. The young sows under fifteen months were a moderate lot, excepting three or four—a good number, no doubt, being entered for sale only. The Berkshire sows under six months also were a moderate lot, with the exception of a few which stood out above the others. The winners showed plenty of breeding and quality. The Berkshire sows and litters were a fine lot, but most of them had small litters, averaging eight in number. Taking them all round, a very fine lot of Berkshires were exhibited, and I have pleasure in saying that, in my opinion, the Berkshire pig, as seen at the 1922 Royal Show, is not deteriorating.

POULTRY.

LEGHORNS.

T. R. Pearce, 42 Park-street, Moonee Ponds.

(Complete awards in this Section will be found on page 42.)

The White Leghorns in the trio classes contained some good birds. The first prize winners were very even in quality all through, while the second pen's chance was spoiled by having two poor hens. The cock in this pen, barring a slight cream tinge in his plumage, was easily the best bird in his class. The Brown Leghorn trio was only medium. In the open White Leghorn classes there was very fair quality all through; the winning cock was very typical, although his comb was slightly disfigured. If the White Leghorn males are in any way deficient, it is their want of sufficient leg and in head points; they have abundant feathering of good quality, good type and beautiful tail carriage, but lack typical Leghorn combs and lobes, and would look better, I think, if they had a little more leg under them. I have no wish to see them on stilts, like their English ancestors, but with this slight addition they would be a much more handsome fowl. Many of the White Leghorn females are too loose in feather, and not too good in comb and lobe. A hen with a long and heavy comb, which follows and touches the curve of the neck, is of little use as a breeder, as most of her progeny will follow her in comb, and this is the cause, no doubt, of the faulty "Minorca" comb seen in many of the cockerels. The Brown Leghorn males were better than the average, and I gave the blue ribbon for the best Leghorn to a Brown Leghorn cockerel. He stood well away from the others in type, color and condition. In females, the tendency is to get the body color too dark and the breast too light, while the hackles are not sufficiently striped. In many cases this is caused by outcrossing strains, with possibly a further cross of cockerel breeding blood thrown in. In several cases this was to be seen in the general mossiness of the back and saddle feathers, together with shafty feathers and brown pencilling on the edge of the breast. Type was not good in several cases. Head points were not good, many females having folded wattles, poor combs and faulty lobes. Black Leghorns were few, but were of passable quality. Breeders should remember that the exhibits should have Leghorn legs and full tails. The winning hens were very nice. Blue Leghorns are not improving in size or quality.

GAME (Other than Indian) AND BANTAMS.

W. Cawthray, c/o. O'Keefe's Timber Yard, Elgin-street, Carlton.

(Complete awards in this Section will be found on page 43.)

There was a fine collection of Old English Game, the winning birds being far above the average. The champion bird stood out for quality and type, and I would advise breeders of "Old English" to try to follow him, and not some of the whipped-tailed birds we have seen at some of our recent shows. Modern Game were few, but select specimens are, I think, on the up-grade, the winners being of good type and color. Old English Bantams made good classes, and some fair specimens were shown, but to my mind the cocks show too much hackle in the make up—the whipped drooping tail of the cross showing out too plainly. Modern Bantams had good support, and amongst them were some of the best birds I have ever seen.

WYANDOTTES.

J. M. Hepburn, 497 Barkly-street, Footscray.

(Complete awards in this Section will be found on page 45.)

The Wyandottes were a grand lot, and some exceptionally fine specimens were shown. The winners in the White Wyandotte trio class were of exceptional quality, with good red tops, nice yellow legs and with pure white feathers. These birds were very well shown.

The winning golden cock was a real beauty. He won the ribbon for the best Wyandotte in the show. The winning golden pullet had a good clean ground colour, with rich, lustrous dark lacings, making a beautiful contrast that would be hard to beat. She also had a first-class hackle.

The Silver Wyandottes that secured the prizes were nice birds, the pullets being particularly fine and of the sort that only a master-breeder can produce.

The winning "Whites" were all good birds. The pullets, particularly, were shown in perfect condition.

Judging by the exhibits received in the any other colour class, it seems that, before long, separate classes will have to be provided for Columbrians. Several breeders now have them, and they are more typical than the birds that were formerly exhibited at our leading shows.

LIGHT UTILITY POULTRY.

G. McDonnell, 150 Camberwell-road, Auburn.

(Complete awards in this Section will be found on page 47.)

The entries were fairly good as to number, but lacking in quality; fully 70 per cent. of the exhibits were either too light or had crooked breast bones, the latter being a very bad fault. The winning White Leghorn cock was on his own both for quality and type, and was shown in excellent condition. This cock was awarded the "Hart Memorial Trophy." The second prize cock was a good sort, but failed to the winner in condition. The third prize cock was only fair, lacking tightness of feather and losing in brightness of face to the winner. The hens were a fairly good lot on the whole, the winner of the first prize being a finely balanced hen, showing good laying qualities, and, above all, being of good size. This hen was well up to 6lbs. in weight, and could have been shown in better condition. The second prize hen was not quite as good as the winner in type and balance, and not too pronounced in egg-laying qualities. The third was a trifle on the small size, but a very useful sort. There was a good entry of pullets, but they were of poor quality. The first prize pullet stood out on her own. She was a nicely balanced pullet, good in both type and egg-laying qualities. A number of exhibits in this class were far too light, and not of decent type. A good entry of cockerels was received, but they were very poor in quality. The first prize cockerel was of good type and nice and tight in feather, but rather big in the comb. He was the only bird in this class that would draw the scales at 5lbs. The second cockerel was good in type, but lost to the winner in feather and weight. He was also too broad in the skull. The third cockerel was only fair. The remainder in this class were far too light, and the greater number had very crooked breast bones. In the A.O.V. light breeds, the exhibits were more uniform, the winning cock being a dapper bird of extra good type, as was also the second prize bird. The latter failed in egg-laying qualities when

compared with the winner. The winning hen was a fine, big, raking nicely-balanced bird, but could have been shown to better advantage. The others failed to the winner in type and weight. Cockerels were a moderate lot, the winner standing out on his own. He was a fine roomy fellow, showing good type and character, though a trifle too long in the legs. The pullets were a useful lot right through. If exhibitors would only take the trouble to weigh their birds and select straight-breasted ones, it would make judging much easier.

DUCKS AND GEESE

P. Briggs, Chesterville-road, Moorabbin.

(Complete awards in this Section will be found on page 48.)

The entry in the various breeds of ducks was certainly greatly in advance of recent years, but I regret to say that the quality does not improve, and there is a general want of good condition noticeable. Aylesburys, Rouens and Indian Runners are on the down-grade, whilst the Pekins just about manage to hold their own. Muscovys came out in great force, but many were shown in a disgraceful state, which, of course, greatly spoils their hope of success. The size and quality of the winners were good, but notwithstanding the popularity of this breed for market purposes, size—which is of such prime importance—was decidedly lacking in most of the exhibits.

Geese made a very attractive display, the winners being fine specimens of the Toulouse variety, which appears to suit Australian conditions the best, the famous Embden variety being now very rarely seen.

FANCY PIGEONS (Part II.).

E. J. Fallu, "Etruria," Pennington-terrace, North Adelaide.

(Complete awards in this Section will be found on page 49.)

I had looked forward with very pleasant anticipations to again judging at the Melbourne Royal Show. There is something there that is lacking at all other shows—the gay carnival-like appearance of the grounds and the crowds are only some of the items that go to make up the allurements and excitement. The pigeon pavilion, with its smart white pens and effective red pannikins, and the gay flags overhead, the attention and courtesy of the superintendent and stewards, all tend to make the judging at this show of shows indeed a pleasure. The array of pigeons was a very fine one. I was surprised to see such a numerous and fine display of Pouters; it is a rare treat nowadays to handle such a fine lot of birds. Jacobins were another splendid section, the two youngsters, Mr. E. McDonald's black and Mr. J. J. Young's red, being very exceptional birds and hard to separate, the latter being very unfortunate to meet such an out and out good one as the black. These are the two best youngsters I have ever seen and both came in the same season. Show Homers were not very numerous, but were the cream of the States. Long-faced Tumblers made a fine show of very even quality, though Mr. Meaker's adult red cock, and Mr. Smith's adult yellow hen, stood out; these are two exceptionally fine specimens. Nuns were good, and even in quality. Fantails poor in number, but good in quality.

SADDLEBACK PIGEONS.

G. Shee, 16 Nyora-street, East Malvern.

(Complete awards in this Section will be found on page 51.)

This is the first time I have had the pleasure of judging Saddlebacks at the Royal Show, and must say I was greatly impressed with the arrangements. In my opinion the pigeon house is an ideal place for pigeons, being well lighted, free from draughts and scrupulously clean, and with uniform cages and decorations, the place had quite a gala appearance, which was greatly appreciated by the exhibitors and public as well. The introduction of a pigeon superintendent is a good idea, and saves the exhibitors no end of trouble. Saddlebacks were well supported, and were quite up to the mark in type, colour and markings. The blue ribbon for the best adult in the show was won by a black striped hen of beautiful quality, grand colour, good type, carriage, head and foot feather. The winner in the adult red hen class was also a great Saddleback, and would have won the ribbon had she been better in type. The Cup for the best young bird was won by a black striped cock; one of the best young cocks I have seen. He had a good head and stripe, type front and foot feather, and highly satisfactory carriage.

PRODUCE.

MAIZE.

H. James, Orbost.

(Complete awards in this Section will be found on page 59.)

There was practically no competition in the maize classes. The exhibits of shelled maize were good, but in other sections the quality was not high. It is a pity more interest is not taken in this exhibit, as the maize crop is becoming increasingly important, and, I think, will continue to do so.

SUGAR BEET.

P. R. Scott, Department of Agriculture, Melbourne.

(Complete awards in this Section will be found on page 60.)

I have to report that the exhibits in the sugar beet class were all of better quality than usual. Some of the roots left little to be desired as regards shape, while others were forked and on the big side. The sugar content of the beets which gained preference in this competition was fairly high, and the shape of the roots was good. The same could not be said about the second prize beets. They were not so even in shape, several being forked, and showing that a large portion of the crown had been exposed above ground. The crown and exposed portion are usually cut off and discarded before being treated to extract the juice in the sugar factory. The crown and the exposed portion of the beet contain a low percentage of sugar and a high percentage of impurities, which affect the purification of the sugar. Forking of the roots, and also an abnormal amount of root exposed, may be attributable, in most cases, to being grown in heavy, stiff soils. The third prize roots were very good in shape, and contained a fair percentage of sugar.

FARM PRODUCE (except Cereals and Potatoes).

W. Gamble, Berwick.

(Complete awards in this Section will be found on page 58.)

Very good samples of hay chaff were exhibited, but several were specially sieved, and not cut from hay in the natural form. For instance, wheaten chaff was made heavy by blowing the greater portion of the flag away, leaving only the stem portion. One exhibit contained about 200 per cent. more nodes in the chaff than would be in natural hay. The collections of oaten and wheaten hay were excellent, and the samples all in a natural condition. The collections of flax seed and fibre were an interesting lot, and the samples of first-class quality. Encouragement should be given to the production of flax. It is a good, payable crop, particularly on the smaller areas now held by returned soldiers. The samples of the fodder silage were poor in quality and few in number, and the same sample was shown both for sweet and for sour ensilage. It is a difficult exhibit to handle, as it spoils quickly. Considering the great importance of conservation of fodder, there is room for further inducements to show more of this class of fodder. The root crops could not be better. They showed quality, size and care in selection. They consisted mainly of mangels and carrots.

The collection of grasses staged by Mr. Baker was one of the best educational exhibits at the show. There were over 300 specimens collected from all parts of Victoria, and correctly named. Pastoralists, as a rule, do not pay any great attention to the grasses in their fields, and do not know the names and quality of the varieties. I would suggest that Mr. Baker be asked to stage this exhibit in a prominent place next year, and that attention be drawn to it in the press previous to the show. Generally, I would say the Farm Produce Section is rather weak in exhibits.

TABLE VEGETABLES.

T. Marriott, McGuinness-road, Bentleigh.

(Complete awards in this Section will be found on page 60.)

After having had long experience, I think I can say the best vegetables I ever judged were at the last show. The vegetables were of the very finest order. The society should endeavour to keep the prize money up, even if entry fees had also to be increased. In these days of so many diseases, good vegetables are very hard to raise. The only inducement is in the honour of winning. Exhibitors often stand to lose unless the prize-money is worth while. I feel sure that it is the desire of the "Royal" Society to secure a larger number of exhibitors.

POTATOES.

G. Seymour, 264 Tooronga-road, East Caulfield.

(Complete awards in this Section will be found on page 60.)

The exhibits staged in this section were more numerous than at last show, and were of a very high standard. Competition was very keen in nearly every class, as the score cards will show. With regard to the exhibits in the class for tray of sprouted seed potatoes ready for planting, it was evident from the condition of the tubers in some of the trays that some exhibitors do not quite understand what is

required to meet the condition, "ready to plant," as some of the trays contained tubers which produced weak buds, others had developed the root system of the plant, and the buds were too tender to permit of planting without damaging the buds. This exhibit may be regarded as the most important in the potato section from an educational point of view, and, on the whole, showed a decided improvement on previous shows.

WHEAT.

A. E. V. Richardson, Department of Agriculture, Melbourne.

(Complete awards in this Section will be found on page 59.)

The number of entries this year showed a falling off as compared with 1921, but the standard of the exhibits was well maintained. Competition, as usual, was keenest in the Low Strength Class. In judging the wheats, consideration was given to appearance of grain, bushel weight, percentage of flour, color of flour, weight volume and texture of the loaf. A sample of each exhibit of wheat was milled, and the flour made into bread. The milling and baking quality of the flour was, therefore, considered as well as the appearance of sample and bushel weight. The Low Strength Class produced keen competition, and the prize winning exhibit was grown by A. R. Michael, of Woome-lang, with a very fine sample of Florence wheat. The sample weighed 65.4 lbs. per bushel, and gave, on milling, 74 per cent. of flour. The dry gluten content, 13.28 per cent., was unusually high for a wheat of this class, and speaks well for the Mallee district, in which it was produced. The wheat was grown on a rainfall, during the growing period, of 8.34 inches, and the yield was 29.24 bushels per acre.

Second Prize in this class was awarded to Kieran Tobin, with Darts Imperial wheat grown on black loamy soil at Jung. The yield was 42 bush, and the bushel weight 67.3lbs., but the gluten content was very low—8%.

A. R. Michael also won the award for Federation wheat with a fine sample weighing 64 $\frac{3}{4}$ lbs. per bushel.

Only one entry was received for the High Strength Red Class, which was awarded to a sample of Cedar, 65 $\frac{3}{4}$ lbs. to the bushel, and possessing a gluten content of 14.2 per cent.. A. R. Michael, of Woomelang, also won in this class.

In the High Strength White Class, some excellent samples were exhibited. The winning exhibit was grown by W. H. Ford, of Katandra, on red loamy soil, and was an excellent sample of Minister—one of Mr. Pye's new crossbreds—weighing 66 $\frac{1}{2}$ lbs. per bushel. The yield was phenomally heavy, 50 bushels per acre, which appears to show that high quality and high yield are not necessarily antagonistic so far as wheat is concerned. This exhibit was also awarded the champion prize. Second prize was awarded to W. Angus Mactier, with a fine sample of Minister wheat, grown on red loamy soil at Tatura.

The "collection of three varieties of wheat" brought four competitors, and the samples submitted were of high quality. First prize was awarded to exhibit No. 6327, with a total of 261 $\frac{1}{2}$ marks out of a possible 300.

The entries for the Sunshine Wheat Competition were less numerous than in previous years. Two of the exhibitors paid but little attention to the preparation of the sheaves and selection of the best ears. One competitor submitted a weevily sheaf. First prize was awarded to exhibit No. 6331. In allotting points in this class, consideration was given to the appearance of sheaf, length and shape of ear, uniformity of ears, apparent freedom from disease, and average

weight of ears and grain. This latter point is determined from the average weight of ten representative ears of each sheaf. It is the most important feature of a wheat sheaf, and, to some extent, gives the judge an opportunity of comparing the probable prolificacy of each variety, for, on the whole, heavy ears and high proportion of grain to straw are indications of maturity of a crop.

The points allotted to the prize-winning exhibits of the various classes are summarised below.

LOW STRENGTH, RED OR WHITE.

Entry	Appearance of Grain	Bush wght	Percent of Flr.	Color of Flr.	Dry Gluten	Strength of Flr.	Wght. vol & tex. of Lf.	Total
	15	15	10	10	15	20	15	100

AGRICULTURAL SOCIETIES' COMPETITION and ONE FARM COLLECTION

(b) DAIRY PRODUCE AND FOODS.

G. H. Deeley, Elliott-avenue, Murrumbena.

(Complete awards in this Section will be found on page 64.)

The flavour and aroma of the butter was not up to standard. It can be made much higher. It lacked that sweet, nutty flavour. The colour was good in some cases, while in others it was too high, and in one case there were two colours in the one box. Straw colour is the mark to aim at. The texture and moisture were fair. The exhibits

were all fair samples. Some lacked richness, but the texture was splendid and the finish good, except where one had cut almost into the texture of the cheese in trying to make it look nice. Milk, cream and eggs were of a high standard, except for a little carelessness in allowing dust to get into the vessels. Bacon and hams were good, but in some of the exhibits the finish of the bacon could have been better, also the flavour could have been more distinct. The confectionery, cakes, biscuits, etc., were splendid.

(c) FRUITS, VEGETABLES, ROOTS, ETC.

J. Milburn, "The Grange," Keilor.

(Complete awards in this Section will be found on page 64.)

In the fresh fruit from the Whittlesea district, the colour and quality were there, but generally was a little on the small side, and hardly up to the standard of previous years. The fresh vegetables were well up to the standard of previous years, both in quality and variety, and the display was very creditable. The potatoes were a first-class lot, and an improvement on other years, and made the exhibit a very attractive one. The preserved vegetables were of a very high order, and thoroughly deserved the highest marks. The roots were well grown, and a fair variety was exhibited.

The display of fresh fruit in the Bacchus Marsh exhibit was excellent, and worthy of all the points allowed. It was of good even size, colour and quality. The fresh vegetables were well grown, and had a little more variety than Whittlesea. The preserved vegetables were a good lot, but hardly equal to the Whittlesea in quality and color. The potatoes were hard to beat, and, like Whittlesea, made a very fine display. Roots were well grown, but lacked varieties.

The fresh fruit in the Sale exhibit was of nice even size, but had deteriorated, and showed spots of decay and bruises. The citrus fruit in this exhibit showed up prominently. The fresh vegetables were fairly well grown, but lacked varieties. The bottled vegetables were of a medium character, and gave room for improvement. The potatoes were a nice lot and well grown, but did not have the varieties. The roots were a medium lot, and might have been better from a district like Sale.

The display from a Mallee farm at Jeparit, in fruit and vegetables, was a very creditable one, and well worthy of all the points. An exhibit of this character is of distinct educational value.

(d) PRESERVED FRUITS, JAMS, JELLIES, PICKLES AND SAUCES.

Miss A. Knight, Department of Agriculture, Melbourne.

(Complete awards in this Section will be found on page 65.)

There were three entries for the agricultural societies' competition, viz., Whittlesea, Bacchus Marsh and Sale, and in each instance the exhibit showed considerable merit. The judging was based first on the assortment and general appearance of the preserves on each pyramid; secondly, quality and grading of the various packs; thirdly, colour, consistency and flavour of jams, jellies and marmalades (one container in each section being opened and tested); fourthly, quality and collection of distinct kinds of pickles and sauces; fifthly, quality, grade and appearance of dried fruit.

(h) EFFECTIVE ARRANGEMENT.

J. C. Gardner, c/o. F. T. Bullock, Pty. Ltd., cr. High-street and Williams-road, Prahran.

(Complete awards in this Section will be found on page 61.)

In the Whittlesea Society's display the bottle stand was finished off too high, thereby spoiling the comprehensiveness of view from the right. The other stands were very well done. The view from all angles of the Bacchus Marsh stand was the best of the exhibitors. This showed a great improvement on last year. The stands were not all they might have been, but the general finish was good. In the display made by the Sale Agricultural Society, the general finish would have been improved had a darker colour been used behind the wool section to throw it into stronger relief. The appearance of this stand was not so good as the others. Some tickets were put in after judging. It was, however, a great improvement on last year's display. Taking the exhibits as a whole, there was a marked improvement this year. Originality will have to be displayed by exhibitors in this class if they desire to stand out from the others.

STATE SCHOOL COMPETITIONS.**(a) FODDER CROPS, GRAIN AND POTATOES.**

J. H. Refshauge, High School, Ballarat.

(Complete awards in this Section will be found on page 61.)

The exhibits in the several sections were not as numerous as in previous years. This diminution may, I think, be accounted for by the fact that the exhibition of agricultural produce from primary schools was made a feature of the Jubilee Exhibition, which ran concurrently with the Royal Show. The exhibits were well staged, and the grouping was so satisfactory that the work of judging was expeditiously carried out. I think that the judging of the exhibits in the State school competition could be carried out by two, instead of three, judges. Although the exhibits were not as numerous as usual, all, with the exception of maize seed, were well up to the standard of previous years. In the samples of oats that were shown, several varieties were wrongly named. I would suggest that, where seed samples are exhibited in small bags, these bags should be untied when placed on the show bench, so that the judges' time in opening bags and folding them back could be saved. Where samples are of 1 or 2lbs., they might be exhibited in bottles, which give a more pleasing appearance to visitors, and a fair indication of the quality throughout the sample is given to the judge.

(c) FORAGE AND ROOTS, GRASSES, CLOVER, HONEY AND FLAX.

W. F. Friday, Agricultural High School, Sale.

(Complete awards in this Section will be found on page 61.)

Generally speaking, the exhibits were about equal to those of last year as regards quality, but they were not so numerous in most classes. This was due partly to the fact that many of the exhibits which had been entered were sent to the State Schools' Jubilee Exhibition. This is not likely to occur again for many years. The exhibits in forage and roots were not quite up to the standard of those

exhibited in the preceding year, nor were the exhibits of flax, but the specimens of grasses and honey were distinctly better than formerly. The beeswax was of excellent quality. No first prize was awarded for specimens of flax, as no exhibitor fulfilled all the conditions required, but exhibits of flax grown for fibre were of good length. The grasses, clovers, etc., were well set up. They possessed very good length, and, in most cases, good colour. The exhibitors went to much trouble to preserve them in a satisfactory manner. In regard to native grasses, I was very disappointed to find no improvement on last year's poor exhibit. No true native grasses were shown. Several teachers have promised to collect native grasses for next show, if only to prove that our teachers do take an interest in native grasses.

CHEESE.

G. C. Sawers, Department of Agriculture, Melbourne.

(Complete awards in this Section will be found on page 62.)

The entries were similar in comparison with last year, but the general standard of exhibits—with the exception of the prize lots—was very irregular in flavour, body and texture. In my opinion, the principal faults were due to the makers allowing too much moisture to accumulate in the curd when stacking the curd on the sides of the vats, and insufficient maturing of the curd prior to salting. This class of cheese matures quickly and goes off in flavour.

BUTTER.

P. J. Carroll, Senior Grader, Department of Trade and Customs, The Rialto, Collins-street, Melbourne.

(Complete awards in this Section will be found on page 62.)

Although the exhibits of butter were not quite satisfactory from the point of view of numbers, they were eminently satisfactory in regard to quality and manufacture. I can say, without fear of contradiction, that it was the best exhibit of quality that it has been my pleasure to judge at any previous show. I think that the feeling that existed in the past, and that militated against a larger number of entries being received, that such competitions were not advantageous from an educational point of view, is being broken down, and that the society might reasonably look forward to an increased number of entries in the future. I am convinced from my experience that those factories scoring a high number of points in the competition feel that they have a standard to maintain in their every-day practice, and, with an ideal before them, they strive for better results. This fact is fully reflected in the improved quality of butter coming from these factories to the export stores, and thus the State has benefited as a consequence of the competition.

BACON, HAMS, LARD AND EGGS.

E. Setchell, 71 Ourimba-road, Mosman, New South Wales.

(Complete awards in this Section will be found on page 63.)

I was greatly impressed by the excellent quality of the exhibits in the champion classes for both hams and bacon. Something is needed to encourage more competition in this section. I found only three exhibitors competing from the whole State. It would be better to divide it into separate classes, or any competitor winning a cham-

pion prize for three years in succession should not be allowed to compete in any other class, I feel sure, by so doing, other curers who do not now trouble to compete with the champions would, if notified, compete in their own class. I think, by so doing, both classes would help to swell the entries and make this section one of the most important of the Royal Show. I was pleased to find the competition in eggs much larger than last year.

WINES (Growers' Classes).

C. H. Morris, Brown Plains.

(Complete awards in this Section will be found on page 63.)

Whilst the prize-winning exhibits were, as a general rule, of satisfactory quality, many of the other exhibits were not as good as one might expect. The sweet red wine was a poor class, and even the best of it was too sweet. One wine was nine degrees "beaume" in saccharine strength, instead of four degrees, as specified. In the full bodied white wine, the prize-winning exhibits were of satisfactory quality, but some of the others contained too much spirit. The muscat wine that was exhibited was particularly good; in fact, I have never previously seen better than the prize-winning exhibits in this class.

WINES (Open Classes).

W. W. Senior, c/o. M. Lang & Co., Market-street, Melbourne; W. E. Lillie, c/o. Curcier, Adet & Co., William-street, Melbourne; C. W. Simmonds, c/o. John Connell & Co., Bourke-street, Melbourne.

(Complete awards in this Section will be found on page 63.)

The exhibits in the open classes of the wine section were more numerous than for some years, and for average quality, in our opinion, nothing finer has come under our notice. We desire to specially refer to the first prize wine in the hock class for old bottled wines as an example of what Victoria produces, and, also, of the development that may be expected when carefully selected wines are allowed to mature in bottle. It is this character that approximates nearest to Rhine wines, and if the best of the hock and chablis types could be bottled here and placed on the London market in ripe condition, they would undoubtedly do more credit to Australia than those known as "export wines." Some good clarets were shown, but, criticising them, they were generally too big in body, and almost approaching burgundies. Ports maintained the high standard set by makers of this type. None of the sherries stood out, although in some cases naturally fine wines had been spoilt by the use of fortifying spirit of poor quality.

The sparkling wines, exhibited again after an absence of several years, were exceptionally fine, and formed a striking exhibit.

Sparkling cider, which at one time showed well, had only a limited entry, and the quality was poor.

In the spirit classes, the whiskies and gins were good, but the brandy entries disappointingly few, and not representative of the best produced. It is a pity that brandy distillers do not exhibit in greater numbers, as there are many fine brandies in the market.

As usual, the serving of the wines for judging was admirable, but in connection with the public tasting, we suggest that the wines which had been opened for judging should not be set upon the tables on the tasting day.

FRUIT.

J. Jordan, Burwood.

(Complete awards in this Section will be found on page 64.)

I was surprised to find that, notwithstanding the season of the year, such a large percentage of the fruit was in very fine condition and of excellent flavour. This was more pronounced in apples than pears—apples being a better fruit to cool store than pears. Unfortunately, some of the pears, after exposure to the air, became black in colour, this being particularly noticeable towards the close of the show. Some varieties of apples, such as "Yates," "Stewarts" and "Rome Beauties," were most creditable to the exhibitors; and, in fact, would be hard to equal in any show in the State. Perhaps a revision of the fruit section of the schedule would be desirable, with the object of getting the most attractive and educational display possible.

CITRUS FRUITS.

S. A. Cock, Percival-street, Bendigo.

(Complete awards in this Section will be found on page 65.)

The entry in the citrus fruit section was disappointing, both from the standpoint of number and quality. In the general collection, only one exhibit was staged. The commercial aspect of fruit growing to-day has altered the competition spirit. This is noticeable at all shows, even when they are held adjacent to the fruit-growing centres. I am inclined to the opinion that larger prizes are necessary to stimulate competition. I feel satisfied that the "Royal" Society would be acting wisely in including a section in the schedule for district competitions, making the prize worthy of competition. This might also stimulate larger entries in the classes already existing, which I would also include. In a district competition, the main factor should be to include completeness of varieties, also the educative and commercial values. Considerable space would be required for such a competition, but I feel satisfied the inclusion of such a section would be welcomed by the different citrus districts in the State, and would prove a stimulus to the industry.

WOMEN'S INDUSTRIES.

ARTS AND CRAFTS.

Miss F. Tronson, 69 Drummond-street, Carlton.

(Complete awards in this Section will be found on page 66.)

The Arts and Crafts this year came up to the usual standard. In fact, in the charcoal drawings and pastels, there were more entries and very much better work. There were a couple of very nice pieces of pastinello, and several pen painting and stencil exhibits. Three rather effective designs for set of table cover and d'oyleys were also exhibited. The raffia work was up to the usual standard. I would like to see more arts and crafts sent from country exhibitors. The handspun yarn from the fleece, and machine and hand-carded wool were very excellent indeed.

FOODS.

Miss G. McLaren, "Maisyl," Ryrie-street, Geelong.

(Complete awards in this Section will be found on page 68.)

Special reference should be made to the splendid quality of the rich fruit and plain cakes. In most of them the blending of flavours was good, and the baking was so uniform that it made the competition very keen. The plum puddings, apart from the prize ones, were not quite up to standard, owing, in most cases, I think, to the boiling or steaming, which needs great care and attention. The oatmeal cake seems to be dying out. There were only two entries. This, no doubt, is due to the fact that Australians use the patent cereals in preference to the good old Scotch oatmeal. The jam sandwich entry—26 in number—was a very fine one, and showed great care in mixing and baking. White scones were good, but I would like to see more entries for the gem scones and coffee rolls. Biscuits were very good. A few were rather large and thick to be dainty. Toffee and sweets were very good, but there were not enough entries in these classes. Preserved fruits and vegetables were very good. These are improving each year, which shows that Miss Knight's lessons are appreciated and yielding good results. It was good to note the increase in the number of entries for the wedding cake, which greatly adds to the effectiveness of the display. The food exhibits, as a whole, were very good indeed, and reflected great credit on all concerned.

HUNTING CONTESTS.

E. Baynes, c/o. Royal National A. & I. Association, of Queensland.

(Complete awards in this Section will be found on page 68.)

I would like to start by complimenting your society upon the excellent programme submitted to horse owners and the public, but there are a few suggestions I would like to make, and in doing so I would like you to understand that they are not made in a fault-finding spirit, but simply in the light of a candid friend. You have an excellent jumping course in your arena, but, in my opinion, the fences are too easy and far lower than met in the hunting field. I think, to test a hunter, some of the jumps should be ordinary posts and rails, such as one sees in the country, and should not be less than 4ft. to 4ft. 3in. In fact, no jump should measure less than 4ft. I did not measure all your jumps, but I found some of them were under 4ft. You must not forget that you have the best horses in Australia jumping on your ground, and that being so, they should get something worthy of their ability. I do not like your open battened-like fences, and no more do your hunting men, who complained to me about these. Might I suggest some three and four rail fences, such as we have on our ground. The posts of these fences are fitted into concrete slots, and can be erected quickly, and when out of use stored away. They stand any amount of clouting. We have had these fences in use for about 15 or 20 years. Our four-rail fences look formidable, but they are really only about 4ft. 1in., with a considerable lean from the take-off side. I am afraid you have too many competitions with the words "for jumping only." This is to be regretted, as it puts the misshapen, unsound horse, but possibly a good jumper, on the same level as a sound good type of horse. In other words, soundness, conformation and behaviour count for nothing. My

idea, in all classes of exhibits, is to breed up, and not to level down. You have a prize for the champion hunter—a good thing and an honour—but I do not like the way it is awarded. My idea is that the winner of your biggest jumping prize should be deemed the champion, and that it should be stated so in the conditions governing the prize. This contest should be near the end of the show. It would thus make a champion prove himself in open competition.

FARRIERY.

T. Holmes, Technical School, Caulfield; E. F. J. Bordeaux, Mt. Alexander Road, Moonee Ponds.

(Complete awards in this Section will be found on page 72.)

We wish to state that, though we had a slight difference of opinion on one minor point, our decision about the prize winners was arrived at without even a discussion, and we were both satisfied that, according to our opinion, we had picked the best men on the day.

Our method of judging was to give points to each competitor for each of the following operations:—

	Maximum Obtainable.
Preparing the foot	10
Making front shoe	10
Making hind shoe	10
Holing	10
Clipping	10
Fitting	10
Nailing	10
Clinching	10
Finishing	10
Time	5
Extras	5

Full points were given for time to every competitor who finished within the prescribed limit—three-quarters of an hour for draughts, half an hour for light horses. Only three competitors were given extra points.

Many of the competitors were nervous, and did not do as well as they would have done in their own shops.

The following were the principal faults for which points were lost:—

Removing the Old Shoe.—Only two competitors did this correctly by drawing each nail separately. All the other farriers wrenched the shoe off after cutting the clinches. Some did not cut the clinches properly. Preparing the Foot.—Generally speaking, too much use was made of the toe knife. In some instances the wall of the toe was cut away, the bars cut out and the sole pared. Stumping the toe was done with the rasp, as well as with the toe knife. Making the Front Shoe.—Many seated the foot surface when it was not necessary, and in a few cases the seating was carried to the extremities of the heels, which is never advisable. Making Hind Shoes.—The outside branch was often made considerably wider than the inner, and the heel lengthened to stop over-reaching. The anterior border of the foot surface of the shoe was in every instance too sharp, instead

of being slightly rounded. Holing.—This phase of the making of the shoe was one of the weakest. The great majority of the holes in the front of the shoe were too straight. Many nail holes were made too small for the nail heads, and in many instances the last nail hole was too near the heel of the shoe, particularly in the inner branch. Clipping.—Generally speaking, the clips were too high and too sharp. Toe clips, instead of side clips, were put on some hind shoes without any visible reason for it. Fitting.—Very few competitors heated the shoe evenly. In many cases the shoes were fitted at a black heat and kept on the foot too long in the attempt to char the bearing surface. In some cases only the toes of the bearing surface were charred. Only one competitor had his shoe of a nice even red heat, and applied for only a short time, as should be done. Several competitors committed the greivous fault of easing the heels. Nailing.—In the majority of instances the nails at the toe were not driven high enough; this is probably due to the fact that the front nail holes were insufficiently pitched, as previously mentioned. Some competitors, after driving the toe nail on one side, drove the heel nail on the opposite side, and by doing so displaced the shoe. Some left the shoe out of place, others pulled it back with the pincers. Had the nails been driven in order from the toe to the heel on alternate sides, this would not have occurred. Clinching was generally good. In a few instances clinches were weakened by excessive rasping. One competitor used a clinching knife and got special points for doing so. As the use of this knife does away with a lot of rasping of the wall, its use should be more general, especially as the clinch is stronger, and the clinching can be done in shorter time. Finishing.—There was excessive use of the rasp on the front of the wall. In a few instances the shoe was fitted back under the foot, and the projecting wall rasped away. This is a very reprehensible practice. In a few other instances the wall was rasped up to the coronet, which is most injurious, even to a strong foot.

In conclusion, we wish to state that, considering this was the first shoeing competition in Victoria, the result was satisfactory; but there is room for improvement, and we are confident that in a few years the general standard will be higher than it was this year. The shoeing of the draught horses was generally better than that of the light horses. We are very pleased to be able to add that, though some must have been disappointed, not one unpleasant word was uttered by an unsuccessful competitor. The losers took their defeat like sportsmen.

The Royal Agricultural Society OF VICTORIA.
